

Ayesha Munir

Batch - 350

Topic : Artificial Intelligence can be the Savior of human race.

OUTLINE

1. Introduction :

thesis statement.

2. The rapid development and adoption of AI in various fields which is beneficial as well as dreadful.

3. Artificial intelligence can be a savior of human race. (thesis)

a Enhancing Efficiency and productivity.

b Improving health care and medicine.

c Enhancing Education and Learning.

d Enhancing Environmental Sustainability

e Power of right decision making.

4 Artificial intelligence cannot be a savior of human race. (Anti thesis)

a Job displacement and economic disruption is a real threat that can replace humans.

b AI is emotionless, heartless which leads to disruption as medical health care.

c Damaging critical thinking skills in young generation.

d It is crucial to critically evaluate the impact on environmental sustainability.

e AI needs software updation timely otherwise it impact the decision making

loop

5. Despite of disadvantages there are many advantages of AI as a savior of human race. (Synthesis)

- a. To enhance the use of AI human being are much needed.
- b. AI introduce new ways of treatments and diagnose new viruses or infections.
- c. righteous use of AI can enhance education and learning
- d. AI powered technologies can optimize energy consumption and reduce waste.
- e. metal bodies have more resistant and a great ability to endure the space and hostile environment.

6. Conclusion.

Imagine a world where diseases are detected and treated with unprecedented accuracy, where industries run seamlessly with enhanced efficiency, and where equality is not just a dream but a tangible reality. The key to unlocking this extraordinary potential lies in the hands of artificial intelligence. With its ability to think, learn and adapt like humans, AI has the power to not only transform industries but also reshape the very fabric of our society. It's time to delve into the immense impact AI can have on human race and embrace the revolutionary possibilities that lie ahead. Nevertheless, as AI continues its relentless evolution and penetrates nearly all facets of human existence, a growing apprehension has arisen, suggesting that it has exceeded its rightful boundaries.

Artificial Intelligence enhancing the efficiency and productivity by using the new methods of industrialization it increases the ratio of productivity which affects the economic conditions of a state. Artificial Intelligence introduces new methods of farming or agriculture, sowing seeds and ways to protect the field which highly improve the development of crops and give boost to economy.

Artificial Intelligence helped in Improving health care and medicine. With the help of AI the health care departments are able to diagnose the new diseases and suggest a suitable treatment and drugs for that diseases. Somehow AI can accelerate the medical research and improve patient outcome. As the world seen how extra advancement of Artificial Intelligence helps the world in crucial time of COVID-19 Pandemic.

Artificial Intelligence helped in enhancing education and learning. With the help of AI the student are beneficiary and produce extraordinary assignment and make their concepts very clear. AI gives a four dimensional view of topic to student so they be able to produce the most sufficient work for the betterment of society. Increase in mental ability increase the society enhancement for example the use of Chat GPT helps the students to understand the topic and produce more efficient idea regarding the topic.

Artificial Intelligence can aid in addressing climate change and promoting sustainable practices. recently in Japan the AI forecast says that the tsunami touches the Japan in few day which help Japanese to prepare for the consequences causes by Tsunami.

AI Powered technologies can optimize energy consumption and reduce waste. It also contribute to renewable energy systems and environmental monitoring.

The complete absence of emotions from a machine makes it more efficient as they are able to make the right decisions in a short span of time. The best example of this is its usage in health care.

Artificial Intelligence influence is multifaceted touching upon the job market, privacy, and interaction with technologies. Worries about job displacement, safeguarding data privacy and the repercussions of an increasingly interconnected digital world. The human beings naturally create fear of losing their job as AI can expand its boundaries which affects the work primarily of human beings.

Artificial Intelligence is emotionless, heartless which leads to the disruption as medical health care. In the wave of infected period of human beings, they need human support, care or love which AI didn't able to do so. In that period the love and belongingness can cure a person immediately along with medicine but AI can't be able to give such love or belongingness.

Artificial Intelligence can create a mindless new generation. In the era of ChatGPT the students didn't pay attention

to the lectures and create a ready made thesis from chatgpt to gain marks which causes a severe damage to society.

It is crucial to critically evaluate the impact on environmental sustainability. AI helped to diagnose about the climate change but cannot lead the people to control the climate change. Only people can help people or make them understand the consequences of climate and vice versa.

Artificial Intelligence is a machine, a man made machine, which needs a software upgradation for productive uses. If the software didn't upgrade on time it causes many problems in daily life.

Despite of disadvantages there are many advantages of Artificial Intelligence as a savior of human race.

People are worried for their job displacement with AI but they didn't think that with the help of AI they all get new level of enhancement and still AI is machines which operated by human all they need is good education to operate the Artificial Intelligence.

Artificial Intelligence ~~and~~ introduce new ways of treatments and diagnose new waves.

of diseases, viruses and infections, with the help of AI we can measure the penetration of disease and suggest an advanced plan of treatment.

Righteous use of AI can produce intelligent and smart kids. This is the duty of guardians, parents or teacher to keep an eye on student so that they use in positive way of ChatGPT or Artificial Intelligence.

Artificial Intelligence can help us to save energy and utilize it in proper way. AI also helped us to make renewable energy resources.

Metal bodies have more resistant and agent ability to endure the space and hostile environment. They can perform different task at same time they didn't get tired like humans and they give humans a chance to utilize themselves in an important task.

In a nutshell, necessity is the mother of all innovations. So is the case with AI and robotics will improve the way we think, the way we explore new horizons, whether space or the ocean. In the near future, things will happen so rapidly that we will see major changes and innovations.
