Implications of climate change for children in developing countries

Outline:

- 1- Introduction
- 2- Climate change and its implications on children in global south
- 3- An analysis of implications of climate change for children in developing world:
 - a- Insufficient resources for future owing to overexploitation in past
 - b- Increased natural disasters creating unliveable conditions for children
 - c- Prevalent malnutrition due to food insecurity
 - d- Unequal opportunities for growth due to increased poverty
 - e- Uncertain future of children in climate change vulnerable areas - forcing climate migration
- 4- Causes of severe implications of climate change on children in developing world:
 - a- Environmental apartheid - North-South gap

b- Political conflicts hindering cooperation of developed and developing world on climate cause

c- Developing countries lack coping capacity due to economic constraints.

d- Short-term goals prioritized over long-term sustainability

e- Insufficient awareness regarding importance of sustainable practices

5- Remedies to mitigate the implications of Climate change on children in developing countries:

a- Enhanced global cooperation and formulate binding agreements

b- Adopting and incentivizing sustainable practices

c- Child Environment activists as stakeholders in global agenda setting

d- Allocation of funds to global south

e- Global transitioning to renewable energy resources.

6- Conclusion

Thesis statement:

Climate change has very bleak implications for children in developing countries. Developing countries are most vulnerable to the impacts of climate change and future of children in these countries is at stake. Pertinent measures and a combined global effort is required to mitigate the damages of climate change and save children from climate catastrophe in developing countries.

Introduction:

Humans have not ~~borrowed~~ inherited this planet ~~not~~ from their forefathers rather they have borrowed it from their children. Unfortunately, human reckless behavior towards ecosystem and apathy towards future generations has rendered the world unlive-able for the children of this generation and next generations. The world is on the verge of an ecological collapse and ^{grave} implications of climate change are particularly visible in developing countries. Climate change has very bleak implications for children in developing countries

as developing countries are the most vulnerable to impacts of climate change. Overexploitation of resources from developing countries has led to lack of resources for children. Moreover increased natural disasters will impact resources availability, increase poverty and inequality of opportunity. Malnutrition owing to food insecurity and climate migration are other factors of concern. These disturbing implications are a result of environmental apartheid, lack of will in global north to support global south, lack of coping capability in global south, insufficient awareness regarding impacts of climate change on global south and inefficient policies focusing on short-term goals. However, all hope is not lost yet. The world can mitigate the implications of climate change and save the future of children in developing countries by adopting sustainable practices, transitioning to renewables, allocating funds to global south and by incorporating the narratives of child activists in global agenda setting. Hopefully, by adopting these measures, world would be able to provide children a right to live in developing countries.
