

# Artificial Intelligence can be the savior of human race.

## Brainstorming (Rough)

Artificial Intelligence is a track for human race.

Artificial Intelligence is can be a safeguard.

AI is the top gear to finish the race first.

# 1. Introduction

Thesis Statement: There are plenty of benefits associated with artificial intelligence, but all provides a common ground to the individuals to boost up their speed in order to achieve their respective goals.

## 2. Human race can be quell by the integration of Artificial Intelligence

### 3. Artificial Intelligence assist in human race .

- a) Assist in creation of new and upgradation of existing weapons.
- b) Human replaced by robots for effective and efficient production, leading to unemployment
- c) Threaten individual privacy, for quick development
- d) Freely accessible A.I tools, vandalize the personal development.
- e) Usage of deepfake, to promote propoganda.

#### 4. Artificial intelligence owns the potential to barred human race

- 2a.) Upgrade State's safeguard system for deterrence
- 2b.) Rapid production is necessary for developmental growth
- 2c.) Artificial Intelligence tools requires genuine data, for effective performance.
- 2d.) Artificial Intelligence must not be penalize for ethical issues.
- 2e.) Human nature is to be blame, rather than artificial Intelligence.

#### 5. Artificial Intelligence is a booster to human race

- 3a.) Utilization of artificial intelligence weapons in war
- 3b.) Recession and inflation causing societal issues
- 3c.) Breaching privacy is a criminal offence.
- 3d.) To boost users, awareness programs are neglected.
- 3e.) Unethical means raised due to the existence of Artificial Intelligence.

## 6. Conclusion

By nature, life of a human being starts with a race. Competing with other creatures, as well as human being is one of the attribute of human, by nature. Therefore, all the opportunities availed by human, either with wise or evil intentions, are meant to dominate. As Machiavelli said, that end is justified, no matter what means ~~are~~ <sup>were</sup> adopted, for the interest of state. In resemblance, artificial intelligence have the same fate. Despite, there are plenty of benefits associated with artificial intelligence, but all provides a common ground of to the individual to boost up their speed, in order to achieve their respective goals. Artificial intelligence have provided a track to speed up the weaponization game, production capacity for rapid development, profit margin and manipulating <sup>of</sup> audiences. However, artificial intelligence was introduced in support to the human nature. Deterrence against other states, economic growth, effective human facilitating devices, and helping material

in various fields, are the central points for which humans are competing. Yet, it is a severe threat for the mankind, due to the human nature.

Artificial Intelligence is the most advance innovation of 21st century, which has the potential to change the dynamics of the world. It has the potential of integrating in any field, thus benefiting the entire mankind. But, unfortunately due to global politics and conflicting relations, artificial intelligence is mostly used in the field which are meant to harm the humans, maintain or secure hegemony or to boost up the profit margin. The contribution of artificial intelligence is negligible in the human favourable domain than its negative impacts. Therefore, artificial intelligence advancement is red alerts, and demands proper thoughts to eradicate the negativities and avail the positivities only.

Introduction of artificial intelligence have provided a new dimension and hope for manufacturing autonomous weapons and upgrade the existing weapons with artificial intelligence, modern to improve the state's defence system. Undoubtedly, earlier the weapons were getting up-graded but had human intervention which had prevented the eruption of humanitarian crisis. However, the launch of artificial intelligence have provided a platform to develop autonomous weapons with negligible human interference. An international company "GHOST ROBOTICS", have developed a dog robot ~~equib~~ equipped with weapon, to be used in wars against human. Such scenarios proves that artificial intelligence is promoting the human race by adopting evil means.

Undoubtedly, artificial intelligence played a vital role in the industrial sector by increasing the production capacity, while maintaining the quality of the product, by replacing human with advanced

robots which resulted in an increase in unemployment rate. Automation and implication of advance robots ensure minimum human intervention, to boost the production rate and quality of product. Rise in industry 4.0, led to an increase in unemployment rate. In June, 2023, approximately 20,000 people lost their jobs due to artificial intelligence. Therefore, artificial intelligence have provided a pathway to effectively and efficiently enhance the production, so as to be on the top ranking.
