Q.10 AI can be savior of human race

Outline:

1. Introduction

Thesis statment: Artificial intelligence refers to the development of computer system that can perform task that typically require human intelligence. These tasks include learning, reasoning, problem solving perception and language understanding. Artificial intelligence ~~refers~~ aims to create machines capable of mimicking and in some cases, surpassing human cognitive abilities.

2. Can AI end the human race? (Overview)

3. Artificial Intelligence could spell end of human race (thesis)

a) IBM's AI bot Watson can beat the best players in a Jeopardy competition.

b) Automated cars are about to replace

c) AI bot will soon become our personal doctor

d) AI has an IQ 50,000 with perfect memory

e) Work with high degree of accuracy

4. Artificial inteligence can not end the human race.

a) Dependency on internet connectivity.
b) Expensive to maintain
c) Artificial intelligence mistakes in healthcare.
d) AI can not be creative in its approach
depend on pre-fed data
e) ~~Only work on data pre-fed data and past experiences~~ Lack of improvement.

5- AI can perform a broad range of cognitive tasks, it can end the human race.

a) AI can play better with more energy.
b) Automatic transmission are easier to use and more comfortable for the driver
c) Providing real-time decision-support to healthcare professionals.
d) Strong AI, describes programming that can replicate the cognitive abilities of the human brain.
e) AI achieves incredible accuracy through deep neural networks.

6- Conclusion.

INTRODUCTION:

"Computers will overtake humans with AI within the next 100 years. When that happens, we need to make sure the computers have goals aligned with ours". (Stephen Hawking). One of the most exciting and potentially scary possibilities is that AI will become superintelligent. This means that will surpass human intelligence in every way, and be capable of solving problems and making decisions that are currently beyond our understanding. It can be savior of human race Like AI bot Walron can beat the best player, Automatic car, help in healthcare, perfect memory and high degree of auracy that minimize human error. But on the other hand it depend on internet, more expensive, mistakes in healthcare, depend on pre-fed data and Lack of improvement. In simple, AI refers to the development of computer systems that can perform tasks that typically require human intelligence. This tasks include learning, reasoning, problem-solving, perception and language understanding. It aims to create machines capable of mimicking

and in some cases, surpassing human cognitive abilities.

2. Can AI ends the human race.

AI systems collect and analyze vast amounts of data about humans, which raises concerns about privacy and the potential for misuse of personal information. Dependence on AI, we may lose the ability to perform tasks that were once considered essential skills. According to a report by the McKinsey Global institute, up to 800 million jobs could be lost world wide to automation by 2030. This would result in massive unemployment and could lead to the significant increase in socio-economic inequality. In conclusion, it is essential to carefully consider the impact of these technologies, where humans are not slaves to machines.
