

# Essay

Climate change awareness: more important than climate actions.

## Outline

### 1. Introduction

Although climate change awareness is extremely important for in combating the ill effects of climate change, however, both climate change awareness and action must go hand in hand in order to ensure the prosperity and security of the globe.

### 2. Understanding the link between climate change awareness and action

### 3. Why is climate change awareness important?

- a- Increases public engagement.
- b- Fosters a sense of urgency and collective responsibility.
- c- Empowers individuals to

make informed choices.

- d- Encourages government and other institutions to take practical measures
- e- Protects the environment by taking significant measures at local level.

#### 4. The synergy between awareness and action:

- a- Awareness along with action ensures resilience by taking pertinent measures.
- b- Collective actions\* stimulated by awareness promotes sustainable practices.
- c- It leads to international cooperation and policy related to climate change.

#### 5. Towards a brighter future: What steps are needed to increase climate change awareness?

- a- Awareness campaigns on social media.
- b- Visual illustrations related to potential negative impacts of

Climate change, in art galleries.

c. Monthly events at educational institutions.

d. Increased role of influential people in creating public awareness.

6. Conclusion.

## Essay:

Climate change, if left unchecked, is a threat to life, health, biodiversity and livelihoods around the globe. Therefore, climate change awareness and climate action are need of the hour. Although climate change awareness is extremely important in combating the ill effects of climate change, however, both climate change awareness and action must go hand in hand in order to ensure the prosperity and security of the globe. Both awareness and action are closely linked to each other. Awareness is like knowing the lyrics of one's favourite song and action is like singing that song on stage. Climate change awareness is very significant because it ensures public engagement and sense of collective responsibility.

Additionally, it pressurizes the government and other organizations to take practical measures to combat the issue of climate change. However, awareness along

with action ensures resilience to climate change by taking significant measures to protect the globe. It also ensures sustainable practices by stimulating international cooperation. In order to ensure the security and prosperity of the mother Earth, it is imperative to take pertinent measures including the promotion of public awareness by mass media campaigns and visual illustrations related to ill effects of climate change. Moreover, influential people should play an active role in creating awareness about climate change. Now is the time to take action by creating public awareness because if people do not end the potential impacts of climate change, then climate change will end them.

Climate change

awareness and climate action are directly interlinked. If there is awareness with implementation, it would not create a meaningful difference.

Both are important because awareness motivates people and governmental institutions to take action. Awareness help to understand the causes and consequences of climate change and empowers one to make informed choices. However, it is through action, such as reducing gas emissions, adopting sustainable practices and supporting climate friendly policies, that people can effectively mitigate and adapt to the challenges of climate change. So, awareness and action go hand in hand in creating positive impacts on Earth.

Climate change awareness is extremely important because it is a first step in order to combat the ill effects of climate change. Firstly,

it ensures public engagement. When people get awareness about a particular issue, they start striving for resolving that issue in order to protect themselves. For instance, **Greta Thunberg**, a Swedish activist, started a campaign through social media in order to create awareness among the masses. She started the 'Youth Climate Movement' by initiating "Fridays For Future" campaign. It encouraged many youth around the globe. They started strikes by taking off from schools and colleges in order to pressurize the government to take actions related to climate change. It shows how public awareness can create significant changes in the policy making of

a country, for the better results in the future.

Secondly, public awareness about climate change fosters a sense of collective responsibility, and urgency. For example, Clean Air Act was passed in 1970 in USA and it has been updated several times since then.

It was created to regulate air pollution and protect public health and environment. This act sets standards for air quality, establishes emission limits for industries and promotes the use of cleaner technologies. This legislation was driven by the harmful awareness about the harmful effects of air pollution on the health and environment.

It created a sense of urgency by recognizing the need of taking significant actions. It shows that public awareness has the potential to implement the policies and regulations that help in the

mitigation of ill effects of climate change.

Thirdly, it empowers individuals to make informed decisions in order to secure their future. For instance, Germany made a deliberate shift to renewable energy sources and sustainable practices, driven by a growing awareness about the consequences of climate change. Similarly, Netherlands has adopted sustainable practices by <sup>initiating</sup> adopting climate friendly policies. In the city of Rotterdam, the concept of 'sponge city' or "water sensitive city has been initiated in order to store the water and to prevent the floods. It has been proved very effective.

Moreover, dutch government also provide subsidies to people who adopt climate friendly initiatives. It has created a

climate friendly environment which is a result of growing climate change awareness.

Fourthly, growing awareness about climate change has compelled government and other organizations to take practical steps to resolve the problem of climate change.

For instance, Paris Agreement of 2015 was signed by countries in order to reduce the average temperature of Earth. It has the aim to limit the temperature at  $1.5^{\circ}\text{C}$  above pre-industrial level. This agreement was made possible due to increased awareness among the masses.

Scientists found out the potential consequences of climate change across the Earth and promoted the urgency to take action as soon as possible. It was signed by almost every country, and these states have pledged to keep reduce

the use of fossil fuels. All of it is a direct result of increased awareness among the masses

Lastly, climate change awareness ensures people to take significant steps at local level. For example, Costa Rica has pledged to become carbon neutral by 2050. She has adopted climate friendly policies, such as "Payment for Environmental services" (PES) which through which she pays the people who adopt renewable energy sources in their homes or factories. It is a welcome initiative and Costa Rica has converted to almost 99% to renewable energy sources. It was made possible due to the continuous effort of government and masses because of the growing

awareness among the masses.

Having said that, the importance of public awareness about the causes and consequences of climate change cannot be overemphasized. However, climate action is equally important in order to ~~to~~ mitigate the harmful effects of climate change. Public awareness along with climate action foster resilience by taking pertinent measures. For instance, the Great Barrier Reef is the world's largest coral reef system and is home to diverse range of marine life. However, it is facing significant threats due to climate change, including rising sea temperature and ocean acidification. To protect and preserve the reef, the Australia has been taking pertinent measures along with environmental activists and scientists, in order to protect and preserve

the environment of coral reef.

For this purpose, the government has implemented Reef 2050 Plan. This plan aims to improve the resilience of Great Barrier Reef by reducing pollution and improving water quality.

It includes measures such as agricultural run off, investing in research and monitoring and implementing strategies to combat climate change. It is a clear example of how climate awareness and action go hand in hand, in order to create positive impacts on the globe.

Similarly, collective action stimulated by public awareness promotes sustainable practices and it promotes international cooperation. For instance, Conference of Parties (COP) has been taken place

every year, with significant contribution from various countries. It has led to multiple positive initiatives such as **Loss and Damage Fund**, which is given to be given to the countries having impacted due to natural disasters ~~the~~ caused by climate change. This initiative has positive repercussions if it is implemented successfully, because it would help the developing countries to focus on building the climate resilient infrastructure along with ~~in~~ the investments on human capital. These types of initiatives are a result of growing awareness among the masses of ~~the~~ underdeveloped countries about their rights and climate justice which would have positive impacts on the globe.

Global awareness about the climate change and

climate action are equally important for a sustainable future. So, there is a dire need to take significant measures in order to increase the awareness among the masses through social media campaigns.

In the age of technological advancements, it is easier to make people aware of the harmful effects of climate change. Likewise, visual illustrations in art galleries about the potential ill effects of climate change can make people more aware about this grave problem. It would usher in an era of prosperity and security around the globe.

Moreover, there is a need to initiate monthly events at educational

institutions ~~at~~ because education has the power to transform the minds of individuals. In addition, the influential people must play an active role in promoting the awareness among the masses because they have the power to change the world. As Barack Obama said, "We are the first generation to feel the impacts of climate change and the last generation that can do something about it." Therefore, now is the right time to take action by increasing awareness among the masses in order to make the Earth more progressive, secure and inhabitable.

In a nutshell, climate change is a grave concern that has the potential to wipe out all the resources and human race from the world. Therefore,

growing climate change action and awareness is the need of the hour. Public awareness and action are closely related to each other.

Although growing mass awareness among the is imperative to bring a positive change, however, awareness and climate action must go hand in hand in order to bring prosperity and security around the globe. Climate awareness is extremely important because it fosters a sense of collective responsibility and public engagement. Moreover, it can pressurize government to take pertinent measures in order to usher in an era of prosperity. Awareness compels governmental institutions

to take actions whereas action fosters resilience and improve international cooperation and policy implementation related to climate change. Therefore, there is a dire need to promote public awareness among the masses, through social media campaigns, visual illustrations of harmful impacts of climate change, monthly events at educational institutions and increased role of influential leaders and public opinion makers. Climate change is the Everest of all problems and the thorniest challenge facing humankind, so there is a dire need to resolve it by increasing climate change awareness and action in order to usher in an era of prosperity and to make the Earth secure and inhabitable.
