

Artificial Intelligence can be saved the humanity:

1 Introduction

"Artificial intelligence can save the human lives. The positive aspect of artificial intelligence cannot be ignored in the present age which serves humanity. Although there are various aspect which proves fatal for humans yet by learning it and promoting the positive aspect of artificial intelligence we will be able to combat the various transition in future which will prove fatal for human."

2 Artificial intelligence can be saved the humanity.

3 The positive aspects of Artificial intelligence which serves humanity

① The use of AI in the field of knowledge.

- (b) AI's role in the provision of jobs
- (c) AI's role in the spread of goodness among human beings
- (d) AI's role in the field of business
- (e) The beneficial use of AI in the daily life.

3 Future's threats about artificial intelligence in the lives of Human beings:

- a Artificial intelligence's role in spreadness of joblessness
- b Man's dependence on machine will deprive him the true meaning of humanity.
- c Nuclear proliferation and the use of AI as a weapon.
- d Promotion of the degradation of Human values
- e ~~Evils intent~~ Promotion of evils through the use of artificial intelligence.

4 How artificial intelligence can be saved the human life in future.

a Role of AI in good generation of food

b Detection of disease through the use of AI

c Progressive role in the promotion of industry and the welfare of human beings.

* Comprehensive role of the artificial intelligence in the medical field.

d Exploration of the new discoveries and knowledge

e Positive use of Ho humane beings by learning the skills

5 Conclusion:

The invention of atom proves benefit for human beings. As the human being produces a large amount of energy. but it will prove disastrous when the same atom will use for the purpose of destruction. The world leaders try to save the humanity by adopting various measures. In the same way the invention of artificial intelligence and will become a question for human whether it serves for humanity or not. The artificial intelligence can save the humanity. The positive aspect of artificial intelligence cannot be ignored in the present age which serves humanity. Although there are various aspects which proves fatal for humans yet by learning and promoting the positive aspect of artificial intelligence we will be able to combat the various transition in future which will prove dangerous for humanity. When we look at the present age

the artificial intelligence proves beneficial for humans in the forms of spreading knowledge, provision of jobs and spread of goodness but when we observe its negative role in the life of human beings as the joblessness dependence on machine, nuclear proliferation and AI's use as a weapon ^{and} degradation of human values. In spite of all these artificial intelligence can save the human lives in future in production of foods and the comprehensive role in the field of medical and scientific discoveries.

Artificial intelligence is the invention of the 1960s. In the beginning it would promote various kinds of services for human lives. People can Human received a lot of ease in their lives after the invention of artificial intelligence. In the beginning of the ~~21st~~ 21st century it became a question whether it will ~~prev~~ serve humanity or not. As a

scientist talks about the use of artificial intelligence. "The beginning of 21st century is the ^{based on} emergence of ^{new} scientific field which is based on "Artificial intelligence". It bring a question with it whether it will prove beneficial for humans or not." (Albert Hoover. Scientific Age. 20th sep 2000)

When we look at the present age we observe that artificial intelligence serves humanity. It plays an essential role in the field of knowledge. Through the help of AI the knowledge spread in the various remote areas of the world. The lay man did not aware about the various types of basic knowledge. Nowadays the lay man aware about the basic knowledge. Accord Therefore, the ~~latter~~ people know about the various fields and problems of the world. As " Awareness and the spreadness of knowledge through the use of

Artificial intelligence depicts the greatest positive aspect of artificial intelligence. which in this way it serves the humanity." (George Clinton. Technology and the use of AI. 9 Aug. 2005) In this way it will promote knowledge among humans.

However, artificial intelligence does not only play its role in the field of knowledge but it will also plays its role in the provision of jobs for unemployed persons. It analysis of man according to his skill not on the basis of his caste or nepo relations. It is a good platform for various types of jobs for skilled persons. A man does not have to move from one place to another place or from one country to another foreign country. He can do his work by sitting at his home. As According to the research institute of

information technology. artificial intelligence provides approximately 8,00,000 jobs for skilled persons in 2018. So artificial intelligence provides a platform for jobs for skilled persons.

AI is not only fruitful for person who are doing jobs but it will also promotes business. Human is a kind of source for progress if they have skill. They but if they don't have it will become burden upon industry. It will Human will also become the victim of corruption and produce less production for industry. The humans who those industry who use the artificial intelligence produces a greater amount of production through the efficient response. According US Bureau statistic of 2018 "These industry which use artificial intelligence produce 50 times greater production rather than those industry which have Human labour."

Here the artificial intelligence produces
a greater amount of production through
the use of Human artificial intelligence.
