

Artificial Intelligence can be the savior of human race

1. Introduction :

Thesis statement: Despite being notoriously famous as a potential threat for human existence, artificial intelligence if properly monitored and used can act as the savior of human race.

2. AI and its increasing relevance in our lives

3. AI and its potential to act as the savior of the world. (Thesis)

- (a) Creation of new jobs in diverse fields
- (b) Smart surveillance and biometric authentication
- (c) Increased human efficiency and time saving
- (d) Advancement in educational and technological fields.
- (e) Role in ecosystem monitoring and restoration.

4. AI as the destroyer of the world (anti-thesis)

- (a) Job displacement and economic inequality
- (b) Privacy concerns and data breaches
- (c) Loss of human skills and productivity
- (d) Loss of critical thinking skills among students

(e) Negative impacts on the environment.

5. By learning the use and monitoring of AI tools, humans can conquer the world

(a) Although in few sectors humans are displaced but large number of new jobs are created

(b) Promotion of responsible AI practices among developers can eliminate data breaches

(c) By learning the AI management skills, humans can increase their productivity and relevance.

(d) Responsible and constructive use of AI actually enhances critical thinking skills among students.

(e) Role of AI in ecosystem conservation surpasses its negative impacts.

6. Conclusion
