English essay

Artificial intelligence can be the savior of human race.

1- Introduction

    a- Thesis statement

2- Understanding of artificial intelligence as the savior of mankind.

3- How Artificial intelligence is the savior of human race? (Thesis statement)

    a- AI can assists to detect diseases early.

    b- AI can solve complex problems easily. ✗

    c- AI can have more solutions tomorrow for youth (John M) *vague*

    d- AI can create new Job for youth

    e- AI can help humans to enjoy their lives. (John M)

The topic is saviour of human race. Not associated with just benefits

4- Artificial Intelligence can be enemy of human race. (Anti thesis)

    a- AI can cause deaths by minor wrong details or error.

    b- AI can create many problems that can be out of control. *vague*

    c- AI can also cause a lot of distractions for youth.

    d- New Jobs requireds skills that are not easy for everyone to adopt.

    e- Robots vision is to took over the world (Sophia)

5- Artificial intelligence can bring advancement and new technologies for humans

  a- Humans can also do mistakes and AI can do work more efficiently with provide data

  b- "AI has ability to understand inside human more than human himself and can have better solutions beyond human mind" (John M)

  c- Humans have limits but AI have no limits in advancements

  d- Computer, Laptop and internet makes human life easir and every one have adapted this easily as AI will.

  e- Robots and AI is just to assist human to do greater achievement in future. (Sophia)

6- Conclusion.

  "Man can never be like another Man. Computer have chips but man have hearts"
                (John M)

Artificial Intelligence can be the savior of humanity. Artificial Intelligence can never replace humans in anyfield but can upgrade their positions in their fields. Artificial Intelligence can assist humans to live there life happily and to make more things easy. Although,

there are a lot of predictions about future with AI but they didnot have much possibility to be true In future. Humans always resist change in life There is a possibility that AI can do error which cause massive distruction but if some human do carelessness or have bad minds can give wrong data to AI but ~~...~~ AI ~~...~~ is not responsible for that disaster. AI can change living standards of people can do jobs for them and save them from many future problems by advance solutions.

Artificial Intelligence can be savior as by it's potential to diagnose diseases early as comparison with MBBS students who have spent his whole life in getting that skill. AI can do engineer Job, it can analyze data and help allocate resources efficiently and many different tasks that are destroying lives of our youth and give them a lot of regrets. Now a days, students are treated like machines and education system is just putting information in their minds regardless to promote them learning new skills. students 20 years life.span just spent in cramming to get high certified job in which he has to sacrifice To spent time with family to

explore world and learning of skills like dancing, sewing, art etc. that are human Nature ~~Jobs~~. AI can save humanity with all that sufferings that are unneccessary burden on human lifes.

There are a lot of reasons we can (prove) that AI can be a savior of human race. AI (have) already done advancements in this world like chat GPT Robots etc. but nothing has been done yet that proves AI is dangerous rather it proves helpful ~~for~~ humans in education and many other fields.

No such paragraph in the outline

No link to topic in the topic sentence

AI can assits to detect diseases early than human beings. AI and Robots are made up of chips have all memory stored can treat diseases very well in less time. Humans have to cram things to store in their ~~mind and have~~ possibility to forgot that. (For Instance,) If there is any uncertain virus ~~spread~~ that ~~doctors have~~ to do alot of ~~research and~~ practise to make vacciness and diagnos them but Robots can process that easily with help of stored data. "Humans live span will increase with help of AI". (John M). AI have potential to diagnose diseases and save mankind.

Supposed situations are not examples

Who? where?

AI can solve problems of coding, algorithem, mathematics etc. AI potential is more than that we have already experience. AI give solutions and plan of actions easily and save time. AI understands humans can show emotions to him and also help them in for psychological problems. For Instance, AI in snapchat application is like a friend who listen your problems and provide solutions to you. Problems that are too complex for humans, AI can solve them with less effort.

AI applications and Robots are the creation of humans for make their lives better. If we just take a glimse of our past, people have to do every work with their hands, They have to remember schedules and all other details have to do alot of efforts for the work which now machines can done in 10 to 15 minutes. If we realize machine can harm people due to their carelessness Advancement in technology have made life better for humans. AI and Robots have stearted working for humans and if we work on that more than humans can live life like a human not machines.

AI can bring many changes to human life. AI can change pattern of education

for humans. uptill now, technological advancement have reduced our burden of Physical work but in future AI can also help to reduce mental stress and burden especially for students. If AI do jobs for humans than humans just have to program that and enjoy the benefits of it. Humans didnot need to do job in future that AI can "do." (John M) Future will be advanced and easy life of every human with help of AI.

With alot of benefits of AI there are also many predictions that create a fear in human mind about AI. Robots are still doing jobs, giving interviews and have all skills that we need in them. But as techology has grown rapidly, if we depends on roborts then roborts can also make more robots and took over the world. The biggest fear of people is that AI can cause distruction in this world.

AI can just follow the instructions which have given to them. AI cannot think emotionally or logically. If any information given to them is inappropriat or they have faced any problem in their system Than can diagnose wrong

diseases which is much more dangerous for humans. That destruction ~~come~~ can cause uncoverable loss in human society. We cannot assign that sensitive task to AI which threaten our lives. If small mistakes couldnot rectify on time cause greater loss in future.

AI can create problems as if something wrong done with Robots that affects their functioning and manipulates its data can be out of control. we have given a lot of power to AI and made that Robots like humans but all humans are not efficient enough to control Robots. Robots have immense potential to do things that can destroy humans like bombs etc. "AI is far more dangerous than nuclear weapons" (Elon musk) AI can create trouble for humans to live there lives peacefully.

AI can cause distractions as we can see that now a days, there are frictioned games, frictioned movies etc that are more opposite to real world. Advansment in AI will change that world, humans will loose their aims, goals, ambitions in life. It seems to be tired and boring for humans to use technology too long time. If people loose their meanings

of life than it doesnot matter how much their life spam increases with help of AI. Every man is different, if someone are lazy easy trapped with addiction and wastes their lifes but other want to achive big goals in life. Youth is the future of our world, If they _____ will not learn how to use AI than AI will use him.

Humans have been updated by time to time advansments. Humans came to know how to use technological devices to make their lives easy. But still there is a generation who have loose there Jobs because They cannot adapt them. In USA, there are at the top in advancement of AI. Recently 40,000 people loss their jobs due to AI (dawrison). AI can be a reason for unemployment of many peoples and make it complex for humans to get more knowledge for there employment. AI can create visualize images which saves alot of money and a cause for loss of many Jobs. everyone cannot adapt technical changes which causes loss for humans

Robots have emotions, understanding, thinking and all communication skills that human posses. Humans have a lot of weaknesses, he required sleep, he can tired, frustrate but Robots can do alot of work with more efficiently. Robots are more better than humans as humans cannot compete with Robots. Robots can want their place in the world. There are alot of interviews with different robots in which humans judge their intensions. "Robots and humans will collectively work for great acheivements in this world" (Sophia). Robots have to fullfil their missions despite of effects on human beings. "If AI have a goal and human interupt them, they will definitely destroy humans" (Alon musk).

There are alot of human minds and have different opinions and predictions about future. Risks are the part of human life. To acheive something bigger we have to take the step and keep in mind that as human is using technology such that AI will be in hands of humans. There is nothing to scared with AI, we have to just update our self as AI is beyond human mind.

Error can be done by humans or AI both but AI is more capable than humans but AI is because of humans. Humans have to think beyond and just just themselve that they are irreplaceable (John M). AI can assist humans in technical things which usually humans took time to understand. AI can do many tasks in less time which is more efficient and useful for this world.

AI can understand humans, as the data which has given to them is made by humans. AI is right now filling human needs as giving them support, can give interviews like humans can talk to humans, can console them better than other humans, can help in education, understanding of complex problems. AI is already the part of human life and humans are very comfortable to AI. If you ask question to AI it will give you answers and in future can do a lot of advancement that will makes humans life more easy.

Humans can do tasks according to their potential by acquiring knowledge in whole life and take time to do tasks. But AI just process tasks of million humans in seconds. Machines, electricity, internet make life of humans too easy as AI is also the part of it. AI is not like fiction movies that Robots destroy everything. AI is new way to live life with more peace, no need to struggle more just update yourself and AI will do everything for you. Increase your limits with help of AI. AI can take human to other advance world.

Future is with youth, and our youth have to depend on skills not degrees. Now a days, every person have mobile phones, internet etc. and it become the necessasity of humans. As like that when AI will become advanced, it will more easier to use and will have many benefits that change the world entirely. Nature of jobs will change but everyone needs freedom to live like machines to store everything in mind etc. change looks scary apparently but when you will used to it became a part of life.

Roboots and AI are made for assistance of humans. If we think deeply,

then we came to know that social media people are just exagurating and manipulating things. Robots have data which have given to them by humans. they didnot have that minds that will make a plan to destroy humans. They can just follow the directions and fulfill their tasks. "There is nothing to afraid of Robots we are here to assist humans" (Ameca). Humans minds can do more advancement in AI and update the world

To sumup of all, AI is future of the world, AI is really a different than humans. Humans dont know their potential as that's why just afraid of AI. Humans have created AI as humans are more smarter than AI. Machines have a lot of benefits in human lives but machines cannot compete with humans. AI is able to do ata of acheivements for humans so we have to promote it rather to scare from it.

"Human like to play chess with human, if human is playing with machine then it is his mistake. there is no comparision of machine with humans"
(John M)

are with a lot of benefits

machines cannot compete with, a lot of achievements AI is able to do alot of promote for humans so we have to promote it rather to scene from it.

"Human will to play chess with human, if human is playing with machine then it is his mistake. there is no comparision of machine with humans"

(John M).
