

# Criminology (Part II)

(Section - I)

Q3: How does Albert Bandura's social learning theory explain the process by which individuals acquire and exhibit criminal behaviour?

Explanation:

Introduction:

Albert Bandura's Social learning Theory emphasizes the role of observational learning and modeling in the development of behavior. When applied to the acquisition and exhibition of criminal behavior, this theory suggests that individuals learn criminal actions by observing others and imitating those behaviors.

Points of process:

Observational learning:

Individuals acquire criminal behavior by observing others, such as family members,

basic statement is crime breeds crime  
crime is learned behavior

peers, or media figures engaging in criminal activities.

### Role models:

Criminal behavior is often learned from influential role models, who may be admired or respected within the particular community.

### Reinforcement:

Positive reinforcement, such as rewards or admiration, can strengthen the likelihood of individuals repeating criminal behavior they have observed.

### Punishment:

Individuals may avoid criminal behavior if they witness others facing negative consequences, illustrating the impact of punishment in deterring criminal actions.

### Limitation of media:

Exposure to criminal behavior in media, including movies or video games, can contribute to the acquisition of criminal tendencies.

## Differential Reinforcement:

Individuals may engage in criminal behavior based on the perceived balance between rewards and punishments associated with such actions.

## Social norms:

Criminal behavior <sup>behaviors of rebels innovators etc</sup> may be learned when individuals perceive it as an acceptable or normative response within their social context.

## Cognitive Processes:

The cognitive evaluation of consequences and benefits plays a crucial role in determining whether an individual will adopt criminal behavior.

## Self Efficacy:

The belief in one's ability to successfully perform criminal acts can influence the likelihood of engaging in such behaviors.

## Reciprocal Determinism:

The continuous interaction between personal factors, environmental influences, and behavior contributes to the ongoing development and exhibition of criminal actions.

Conclusion: In ~~conclusion~~, Bandura's Social Learning Theory provides a comprehensive framework for understanding how individuals acquire and exhibit criminal behavior through observational learning, reinforcement, and cognitive processes. ~~The~~ theory highlights the importance of social influences, emphasizing the need for societal changes to prevent the transmission of criminal tendencies.

content is correct but 4 page ans is extremely short  
its is good enough for 10 marks  
give 2 page explanation of the theory and its  
application  
and dimension  
and 4 5 pages explanation of process  
ans is incomplete 6/20

## (Section - II)

Qs: How does the concept of recidivism contribute to understanding the effectiveness of rehabilitation programs within the criminal justice system?

### Introduction:

Recidivism, the tendency of previously convicted individuals to relapse into criminal behavior, is a critical factor in evaluating the efficacy of rehabilitation programs within the criminal justice system. Understanding the intricate relationship between recidivism and rehabilitation is essential for shaping the policies aimed at reducing reoffending rates, and fostering the successful reintegration of offenders into society.

### Contribution of recidivism:

1) Recidivism Rates as a metric:

Monitoring the recurrence of criminal behavior among rehabilitated individuals provides a tangible metric for assessing program effectiveness. Example: A program that results in a significant drop in recidivism rates suggests successful rehabilitation.

### Individualized treatment approaches:

Customizing rehabilitation programs based on the specific needs and risks factors of each offender enhances their chances of successful reintegration.

Example: Offering addiction treatment for a substance-abusing offender rather than a generic intervention.

### Educational and vocational training:

Providing educational and vocational opportunities equips offenders with skills, crucial for employment, reducing the likelihood of returning to criminal activities. Example:

Offering job training programs that enhance employability upon release.

## Mental health support:

Addressing mental health issues within rehabilitation programs is crucial, as untreated conditions may contribute to recidivism.

Example: Providing counselling services for individuals with mental health challenges.

## Community Engagement:

Involving communities in the rehabilitation process fosters support networks for individuals reintegrating into society.

Example: Community based programs that facilitate mentorship and support.

## Post-release Supervision and Support:

Implementing structured post-release supervision and support mechanisms helps individuals navigate challenges during the critical transition period.

Example: Parole programs with ongoing monitoring and support.

## Restorative Justice Practices:

Encouraging offenders to take responsibility for their actions and make amends

Through restorative justice practices can contribute to reduced recidivism.

Example: Mediation sessions between offenders and victims.

## Substance abuse treatment:

Targeting substance abuse issues is crucial, as addiction often plays a significant role in ~~criminal~~ behavior.

Example: Rehabilitative programs offering comprehensive substance abuse treatment.

## Reentry Programs:

Comprehensive reentry programs that address housing, employment, and social integration are ~~vital~~ in preventing relapse into criminal behavior.

Example: Transitional housing and employment assistance for released offenders.

## Long-term Follow-Up:

Continued monitoring and support after program completion are ~~essential~~ to ensure sustained success in preventing

recidivism. Example: Post-program evaluations and follow-up sessions.

Conclusion:

To sum up, the effectiveness of rehabilitation programs within the criminal justice system can be gauged through their impact on recidivism rates. By addressing the root causes of criminal conduct, rehabilitation programs have the potential to contribute significantly to a safer and more rehabilitative society.

ans is correct but lacks discussion about rehabilitation programs within the criminal justice system  
discuss this jail systems and laws and concepts of retribution  
rehabilitation retribution and reformation etc  
need improvement 6./20
