	DNo.2
	CIRCULAR DEOT ISSUE IN ENERGY SECTOR
1	INTRODUCTION:
	Circular debt is a term that has become synonymous with Pakiston's energy sector,
7	efers to the cascading cycle of non-payments
11	problem in Pakistan that how caused
- 11	ignificant econol and energy sector chollenges-
-	let despite the efforts by successive governments
38	igh of Rs. 2.5 trillian (3% of GDP) as of 2023.
1	the energy sector its seeds were sown
i	n 1990's with the implementation of contraction
11	llowed furnance oil based expensive power
110	eneration plants and burdened the government
11	nergy fuel mix, loss incurring Power Distribution
	empanies (DISCOs), flawed and delayed power arish determination and unbudeted subsidies
a	re some of their factors contributing
100	ence needs immediate attention of policy
	a kers to renegotiate contracti with Prodependent

	Power Producers (IPPs), improving financial
	Performance of Power Distribution companies
	(DISCOS): Dublic awares
	(DISCOS); public awarness regarding non-payments.
	and theft of electricity can be some of
	The introduction is lengthy. Shorten it a bit
	CAUSES OF CIRCULAR DEBT ISSUE IN
1	ENERGY SECTOR
	The circular debt issue in energy
	sector is mainly caused due to flowed
	contracts with Independ to Pawer Producers (IPPS),
	aperational inefficience of Power Distribution
	Companies, Pitfalls and delay in Earibly determination
	transmission and distribution loss, poor revenue
	collection by distribution companies and unbigeted
	Subsidies. The accumulation of circular debt in
	energy sector is not only affecting the
	available capacity but iso the creditworthiness
	of country in The eyes of investors. The
	5 key contributors to recircular debt eyele
	are as under-
	Benefit and the state of the st
1	Flawed Contracts with Independent Power
	Producers (IPPs)
	In 1994, mojor contracts were signed
	with Independent Power Producers (TPPs), and to
1.15	give eapacity payments to the companies
	instead of utilization payments-Furthermore, by
	the installment of 100s we opted for expensive
	energy source like fuel, coal, gas etc. The checks

	contracts did not mention checks on
	expensive fuel utilization by these production
	companies. It lead to an increase in the generation cost because of capacity payments
	along with rent payment under "Take or Pay"
	model Moreover, the powerts in Juliar based
	national exchequer as the consistent devaluation
	of rupee-As a result, payments to TPPs are
	Keep the description of a single heading brief
2_	Opperational Inefficiencies of Power
	Distribution Companies (DISCOS)
	Companies (DISCOS)
	Pakiston's energy mix is highly expensive
	due to over 40% of power generation relies
	on imported fuels. Over the years our reliance
	of Liquefied natural gas (LVG) and imported
	coal has increased to the imported fuels are
	subject to their International market prices, a
	rice in international prices adds to the
	cost of power generation, which the consumer
- 11	end taribbs are unable to recover fully,
	adding deficit in energy sector Expensive
	electricity also lowers its demand and
	consequently poor bill revenue generation by
	distribution companies (DISCO) triggering a shortfall
	n cash flow with energy sector. The nates
4	notified by the government for end
	consumers are often lower than the tarible

	Highlight the references	
	recommended by NEPRA(National Electric	
	Power Regulatory Authority) du to political	
	reasons. This creates a disparily between	
	electricity cost and revenues, thus increasing	
	the circular debt	
	and the same of th	
4_	High Transmission and Distribution Loses by	-
	the Distribution Companies (DISCOE)	
	All the distribution companies (DISCOs)	
1	have been incurring huge transimission and	
	distribution loses and facing law recovery of	
	the billed amount (due to leakages, electricity	
	theft and non-complicance, which add to the	
	Circular debt accumulation- Minimum 20%.	
	electricity is lost in transmission and	
	distribution creating disparity between distributed	
	electricity and bill recovery adding to the	
	circular debt-	
5.	Unbudgeted Subsidies-	
	Government Provides taribb differential	
	subsidies to the Power Distribution Companies	
	(DISCOS) for distributing electricity to the end	
	consumers and to protect consumers from high	
	electricity cost. But most aften governments	
	cannot fully fund the subsidies lead to	
	a revenue-cost mismatch, a significant	
	contributor to the circular debt. While	THE REAL PROPERTY.
	Subsidies are intended to make electricity	
	more apportable for consumers, this management	

	has contributed to the circular debt issue. Add more arguments in this part
	SUSTAINABLE SOLUTIONS TO BREAK CIRCULAR
	DEBT CYCLE
	To break the vicious cycle of
	circular debt in energy sector, policy makers
	need to take resonable steps like renogliating
	Contracts with Independent Power Producers (IPP)
	improving financial performance of Distribution
	companies, public awares regarding theft and
	non-payments, reaving cost of electricity
	generation and shifting to cheaper and sustainable
	energy productions
1	Renegotiation of Agreements with Independent
	Power Producers (IPPs)
	The IPPs installed in 1986, 1994 and
	2009 have never been renogotiated even once
	until 2020 due to criminal negligence and
- 11	Kickbacks Some of the agreements with
	power producers were renogliated in 2020;
	including utilization payment of electricity
- 11	instead of capacity payment and rent
	paymenti, also the local power poducers to
	be payed in rupe instead of dollars-
	However, higher no number of Independent
	ower Producers were installed in 2011 and
. 2	1015 with a 14 year time period mentioned
	n the agreements, which will be able to

Improving Financial Performance of	
Distribution Companies (DISCOs)	
High Transmission and distribution loses.	of
distribution companies and unability to recover	
bills is a major contributor of circular deb	-
To improve the financial performance of	
distribution companies, government needs to make	
them independent and decentralized. The	
decentralization help them to recover bells	
by being inabtracted of ministrial influence,	
Which can be ensured by municipality model . I	E
is antidote to the political interference as	
would assign responsibility of bill recovery to	
the very political leaders, who he otherwise	
interferred with the sees administration	
decisions Hawever, a strong local government is	a
pre-requiste for the implementation of this	
model -	
Additionally, by breaking up distribution	
areas into small units can reduce the trans	missia
loss-large service areas translate to more	0
transmission lass and poor sill recovery because	
larger distances between control centres and	
field offices and operations, weakening the contr	
and aversight capacity of distribution companie	The second section is
Smaller units will have more control and	
oversight capacity resulting into higher hill recover	ry

0	and Non-Payments.
	Public awarness campaign reghighlighting
+	he repercussions of power theft and
	mportance of timely hill payments can play a
	pivotal role in mitigating the issue. Addressing
11	p circular delt requires a collective effort that
п	ncludes raising public awarness. Informative
и.	compaigns foster a sense of responsibility among
ш	Consumers - By shifting the public perception on
11	electricily from an entitlement towards a
11	private good will help in recovery of bills. Also
- 11	when citizens undistands how their actions
+	impact broader energy ecosystem, they are more
+	likely to adopt responsibility in energy!
	Consumption practices_
-	Reducing Cost of Electricity Generation:
	Electricily generation cost reduction is
- 11	another solution to curb The issue of circular
- 11	debt. This can be done by adopting
1	cheaper electricity sources and shift reducing
	reliance on impriced fuel-Government needs
- 11	to work on indegenous energy sources
	like Thar Coal having the power generation of
	over 100 GW and renewable energy with over
	30000m potential of power generation.
1	Covernment should also shift to
-	

generation. Under the CEF CPEC, major are underway to reduce the reliance on inside power generation. Some of them are ed like karot Hydro Power Project with 4 of 730 MW energy generation and variant Hydro Power Project with 883 MW. I he wind project installed under CPEC apacity of 4500 MW power generation and projects with 3000 M capacity. Government put more that and attention towards projects as they will be significant in the circular debt in energy sector. SION: Add more arguments Circular debt is a major challenge for its economy and energy sector. Addressing problem requires a comprehensive and including short-term and medels of financial turnaround of its reform in IPPs cripicals and shifting to eteningy production—the implementation of political will help to break the vicious
