Insufficient leadings Draw diagrams Work on math portion (a) Answer: Earthquakes are generated due To the movement of plakes in to the movement of plakes in earths' crust. There called plake rectanics Theory". According called plake rectanics cruss. major plates move sometimes These plates move sometimes is above the other and sometimes by retting away from each other. 2. South walk is presented when one plate's since portion is hereal when half of that plate is still when that plate is still when that plate is seleased the energy built is released of earth experiences a shake a allower since a	
Openhon. No.4 To the movement openhon at the ory earth's crust. These is a theory called plate Tectonics Theory. According called plate Tectonics Theory. According called plate Theory there are T to this theory there are T to this theory there are T to this theory there are times major plates move sometimes These plates move sometimes is above the other and sometimes by retting away from each other. South wake is prepared when one plate's some portion is hereal when that plate is still wibrating to move. As a result these is suilding energy and the energy built is released Too. As y suild is released Reast!	
Question. No.4 Question. No.4 (a) Answer: the quakes are generated due to the movement of plates in a theory earth's crust. There is a theory are 7 there are 7 the this theory there are 7 the this theory there are 7 the this theory there are 7 there are 7 there are 7 there are 7 there are 1 there are plates move sometimes is above the other sometimes one who petting away from each other. 2. Sarth wake is henerated when one plate's since portion is hencold with all of that plate is still with a result the energy built is released the cast the energy built is released. By cast the court of the surface of the surfac	
These plates move sometimes is a theory earth's crust. These is a theory earth's crust. These is a theory called "Plate Tectonics Theory". According their theory there I are T by this theory there I are T major plates move sometimes These plates move sometimes one which earthother, sometimes one is above the other and sometimes by retting away from each other. South wake is henerated when one plate's some portion is henceth when that plate is still wibrating to move. Its a result there is wilding energy and when that plate is released tom. As a result is released	
These plates move sometimes is a theory earth's crust. These is a theory earth's crust. These is a theory called "Plate Tectonics Theory". According their theory there are are 7 to this theory there are are 7 to this theory there are sometimes major plates move sometimes These plates move sometimes one which earthother, sometimes one is above the other and sometimes by retting away from each other. South wake is henerally duhen one plate's some portion is hencell when that plate is still wibrating to move. As a result these is wilding energy and when that plate the energy built is released so earth.	Nau
These plates move sometimes is a theory earth's crust. These is a theory earth's crust. These is a theory called "Plate Tectonics Theory". According their theory there are are 7 to this theory there are are 7 to this theory there are sometimes major plates move sometimes These plates move sometimes one which earthother, sometimes one is above the other and sometimes by retting away from each other. South wake is henerally duhen one plate's some portion is hencell when that plate is still wibrating to move. As a result these is wilding energy and when that plate the energy built is released so earth.	Question-No.
to the movement of places in to the movement of a theory earth's crust. These is a theory called "place Tectonics Theory". According called "place Tectonics Theory". According called "place Theory there are 7 to this theory there are 7 to this theory there are 7 this theory there are sometimes major places move sometimes major places move sometimes is above the other and sometimes is above the other and sometimes so arthorate is place is still wibratay to move plate is still wibratay to move. Its a result there is swilding energy and when that place is released the energy built is released so east.	generated due
earth's Crust theory" Hecording called "Plake Tectonics Theory" Hecording are 7 to this theory there are 7 to this theory there are 7 to this theory there sometimes. These plates move sometimes one subbine each other, sometimes one subbine each other and sometimes is above the other away from each other. 2. Farthquake is penerated when one plate's sme portion is beneath the other plate is still wibrating to move. As a result there is swilding energy and when that plate is still wibrating to move has a result the energy built is released. The energy built is released. The earth the surface.	- (a) Answer: Thoughes are
earth's Crust theory" Hecording called "Plake Tectonics Theory" Hecording are 7 to this theory there are 7 to this theory there are 7 to this theory there sometimes. These plates move sometimes one subbine each other, sometimes one subbine each other and sometimes is above the other away from each other. 2. Farthquake is penerated when one plate's sme portion is beneath the other plate is still wibrating to move. As a result there is swilding energy and when that plate is still wibrating to move has a result the energy built is released. The energy built is released. The earth the surface.	Earnest of theory
called "plake Tectonics" are 7 to this theory there are 7 major plates in earth's crus. These plates move sometimes These plates move sometimes is above the other and sometimes is above the other and sometimes by retting away from each other. 2. Earthquake is renerated when 2. One plate's some portion is hereall when that plate is still wibrating to move. As a result these is building energy and when that plate is released too. As a result is released	to the met These is a product
major places in earth's crus. major places in earth's crus. These plates move sometimes which each other, sometimes one which each other, sometimes one is above the other and sometimes by getting away from each other. 2. Earth public is renegated when one plate's some portion is hereall is he other plate. The other traft half of that plate is still wibrating to move. As a result there is swilding energy and when that plate is released the energy built is released on as a result the energy built is released	TU MAN TO THE TOTAL OF THE TOTA
major plates move sometimes These plates move sometimes one ubbing each other, sometimes one is above the other and sometimes by retting away from each other. 2. Earth wake is penerated when 3. One plate's some portion is hereall the other plate, The other wibratary to move. He a result there is suilding energy and when that plate is released the energy built is released of east.	10 20811
These plates move sometimes These plates move sometimes one which each other, sometimes is above the other and sometimes by retting away from each other. South wake is renerated when one plate's some portion is hencoll the other plate is still wibsating to move. As a result there is building energy and when that plate is released ton. As a result is released	Daniel
when that plate is seleased the each other and sometimes is above the other and sometimes by petting away from each other. South wake is generated when energy state. The other that half of that plate is still wibrating to move. As a result there is building energy and when that plate is released the energy built is released one as the each the surface	major partimes
is above the other and sometimes by setting away from each other. Southouse is generated when one plate's some portion is hereal. the other plate is still wibrating to move. He a result there is building energy and when that plate is geleased; the energy built is released. By east, result the surface	met sametimes one
2. Southouse is generated when 2. One plate's some portion is beneath the other plate. The other that half of that plate is still vibrating to move. As a result these is building energy and when that plate is released the energy built is released Greatt. The Surface	- the other and sometimes
2. South pulk is generated when 3. One plate's some portion is beneal. the other plate. The other trap half of that plate is still with atting to move. As a result there is suilding energy and when that plate is released too. As a secult is released east. is released	
is the other plate. The other trap half of that plate is still wibsating to move. As a result there is building energy and when that plate is released the energy built is released so east.	
the other plate. The other trap half of that plate is still vibrating to move. As a result there is building energy and when that plate is released too. As a released too. As a result is released.	2. One plate's same portion is beneath
wibsating to move. As a result there is building energy and when that plate is released the energy built is released so as the east.	
there is building energy and when that plate is released too . As a result is released too . As a result the surface	trap half of that plate is still
when that plate seleased the energy built is released too. As a result the surface	- vibrating to move. As a result
the energy built is released too. As a result the surface	there is building presey and
ton. As a result is released	when that and I down not
of east. the surface	The energy 1 of 10
	of the sightee
earthquake.	shake called earthquake.
