Mock exam #1

Topic

Artificial intelligence and
governance: Navigating the
future of Policy and
Regulation

1 Outline:

1.1 Hook

1.2 What is Artificial intelligence?

1.3 What is governance?

1.4 How AI and governance interlinked?

1.5 Thesis statement

• Navigating Future Policy:

2 Importance of AI

2.1 In education department

2.2 In medical field

2.3 In Agricultural area

2.4 To govern state effectively.

3. Future Policy to run AI and governance.

3.1 By authorizing A9

3.2 By taking control of A9

3.3 By applying charges to use its latest version

4. Regularization of A9

4.1 By managing A9 through human

4.2 By ensuring the peace, stability and security

4.3 By following UN Charter

4.4 By legally authorized

4.5 By applying penalties

Conclusion

The Essay:

Once upon a time, an old man goes to the mobile mechanics. He asks the mobile mechanic to fix his mobile. He says that, there is nothing wrong with mobile. An old man asks the question, then why do not my son call me?

Although AI, IT, change human being life completely but it pose serious threat to the survival of mankind.

Although artificial intelligence play crucial role to run the state, to teach people efficiently, but it has significant damages to mankind.

Artificial intelligence is an electronic tool that run by the instruction.

The instruction which are implanted in the machine. Then, that device run according to that information. It is helpful to the human being to make the work efficient.

on the other hand, governance is the system through which a state or institution run. Through governance, a state can perform their work properly and get prosperity.

Artificial intelligence and governance, these are interlinked because governance can be run smoothly with the help of modern electronic tool. With the help of AI, human being can perform their work effectively. There is minimum chances to be wrong in the process.

If a state or institution have stability, Prosperity, then further applying the method of AI, the peace in state can be enhanced. Because world is going to be advanced, there is also a critical need to govern the institution with modern electronic tool. So, AI and governance is interlinked.

Artificial intelligence have significant impact but it also have threat to mankind. By applying future policies like, to authorize the artificial intelligence, control the AI and apply the charges. It can make more efficient to use to govern the state and institution. It is also important to regularize the AI by managing AI tools, keeping peace, stability and security, by applying penalties. Due to future policies and its regularization, it makes more efficient and effective to use.

AI play significant role in different field of life. It helps the governance to run the state effectively. In education department, there are number of opportunities to learn the skill and implement to their teaching methodologies. AI help for student to solve the question, practice their papers on

chat GPT. It is helpful for teachers to learn new skills, method to teach the students in advanced method. Students can learn advanced courses regarding AI, its tools and its implication. As well as, it play important role in medical field. It is more easy to diagnose the diseases and to prescribe relevant medicine. This is helpful in visual operation to diagnose stone in critical part of body. It is also play significant role in agriculture and over all to govern the institutions of the states. Now, it is more easy to implant a hybrid seed and plants. They grow very fast and produce more yield as compared to the traditional method. The traditional method is implementing most of the areas, but if government follow AI method

it is more easy to get a high yield of vegetables, fruits, seeds. AI is helpful in every field of state but it also have serious threat to the survival of mankind. So it is need to make policies, and very much need to make it regulate. By following policies, it become more efficient and human being face no threat in their daily life. First of all, there is a critical need to authorize the AI. By authorizing AI, there is less chances to harass the human being. Everybody will not use its advanced and critical tools that is used by intelligence, Bureau department and army. Secondly, By keeping check and balance on artificial intelligence. AI play significant role in mankind, but excess of everything is bad. So, most of people use it

for their criminal activities. They are all against the government institution. They make propaganda against the government, army, intelligence department. They use cipher code to transfer information from one country to another country. They are responsible in terrorist attack. They navigate their weapon to the man, and for thousand of distance, they kill the targeted man. Nobody knows that what happened at the moment. So, there is need to to control the A9 tools. Last but not the least, government should apply the heavy charges to use its most latest version like robots for their personal use. If a man using robots for the betterment of human being, there is an good opportunity to play its role in

the development of country. but if man is not using for betterment of society, and use any kind of criminal activity, then it is too much to apply heavy charges or sent him to jail. A man is answerable to the state.

State should take strict action against the person.

There is number of policies that govt can adopt to make country proper and stable. So, there are many tools to regularize the A9.

By regularizing A9, Government can get benefit from it and use in certain department to enhance its efficiency.

First of all, by managing A9 through human being. Because A9 is the invent of mankind, he can better understand, how it can be deal. A mankind know very well its harmful

areas and its beneficial areas.

He can deal it very efficiently.

Secondly, A9 must be regularize to maintain the peace, stability and security in the country.

Because a state can not run without peace and security

so it is most important for government to prioritize the

security & peace of the

country. For that purpose, it

is need to regularize the

A9. Because its latest version like Robotics can replace the

human. Rather it is the invention of human being, but at one

time it will be more

advanced, so it is difficult

to handle it. It will act

like a master and human being

behave like a slave. So, it

is import to regularize the A9.

Thirdly, govt should apply the

penalties. if a man use it for

wrong purpose, criminal activity,

against the peace and security of the nation, it is more important to apply heavy charges and give them punishment. Fourthly, there is need to make a some kind of act to legalize and regularize the A9. Because it become the demand of society and human being. Nobody can live without using it. Because it have harmful effect to the mankind but as well as it have beneficial for mankind. So, if an act is made regarding A9, it will be more clarify the usage. On 3 March, 2024, UN security council held a meeting regarding A9. UNSC ordered to use A9 effectively by establishing the peace, security, stability in the country. No one country will use A9 against the other country. Because it is against the humanity.

To conclude, AG have significant role to govern the state. It play crucial role to managing the educational, medical, agricultural fields. It is innovator for the mankind to achieve its goal easily. But side by side, it have serious or harmful effect to the mankind. So, there is need to make future policies and regularize the AG. By implementing law and order, managing AG, apply heavy charges, apply penalties, it will be more easy to achieve peace, security and stability, that is required to govern the state. If artificial intelligence and governance system work side by side, then country will absolutely grow. In the nutshell, there is a pledge to create a ~~new~~ areas where it can run effectively regardless of hindernes and obstacles. Country will absolutely develop with the help of AG and governance.
