

English Essay

'Globalization and Human Rights: Progress and setback'

Intro:-

Globalization and Human Rights

Out-line

Introduction:

Globalization and Human Rights

World has now been changed. It became a global village. There is no limit and boundaries left for human beings. Today's

The era of tremendous revolution,
This is the age of progress,
competition and innovations. This
Era has give the man real wings
by which he can fly, go from
one place to another with in no
time. Communication is as fast
an one can imagine. One can
place order in jus eye blinking
time, also can enjoy the real
imagined world, where he want
to live, what he want to
do; can do, what he want to
eat can eat, which season
he like the most, can enjoy
-in. It's all because of
globalization Not even in this
regards but also in field
of Education and health, by the
mean of globalization, one can
choese the field of serise,
he likes, can study where
he can found his type of

intrust. In other side, in field of medical and Health care department, if the Treatment of any disease is not possible in developing or third world countries, they may concern to developed countries. It make easy the Treatment and cure disease, as well as it controle the death rates and also opens the new gateway of investigation research. It promote culture, traditions, customs, values, respect others as well. It emphasis on human rights if someone have an issue, it's just not his consider his problem, it just treat as a problem feel by everyone on a global perspective. It has opened the mind box and change the world completely. Human Rights are the key to success everywhere you live, interact people, you influence them and impress by them, reason behind, this phenomenon

will be always human rights.

Main body, (Globalization and H.R: Progress)

a-1 By Promoting Trade/ Trading Economy rise up by G.

Survival of man is necessary not the things. For the man survival goods are crucial, and for the goods, like food, water, shelter and all other needs of life economy is important. This problem can be sought out by trading to all over the world. by global means of trading. If a country make much-more trading it's GDP will increase, and increase of GDP means prosperity, and prosperity itself means of progress. Globalization make it easy, feasy. In a metter of seconds, million, billion and even trillions of deals are going to be done now a days. It is more comfortable, too much easy, very influencing and innovative way of trading are very common by

The comparison of old system, the barter system, the revolution from barter system to currency and from currency to two way exchange, journey is so excited and so informative.

2 Promoting health and Education

Globalization, by which man to man, country to country, distance doesn't matter. It has a great influence on both major field of human survival, after food and economy the next need which is so important to human beings is health and education. These both are very crucial to human being to control on birth and death rates, to cure diseases, to overcome health problems, pandemics, viruses, infections, and even to cure a disease, problems are being discussed and researchers

and work is being promoted day by day. There's ~~not~~ a single platform, the world has become, so the field of health care and field of education is available for everyone. Education is as needed a man as food, education, now a days is equal to ~~get~~ someone's progress. The more he is educated, know the world, can do some research, performe something for his country or world survival the more he's able, the more he's precious. Education is just like back bone in a country's field of progress.

3. Introducing new technologies and inventions.

If a person even think-back, the Rapid change in the field of science and technology is just looking like a dream of a mad guy. It's just like

a journey from impossible to possible, from imagination to reality from beginning to rights and peaks. As Allah created the man with the ability and the title of superiority to every creature on earth, he's just proven it by exploring new ways, new things, new era, new aspects of life. Technology and development go side by side just like bank of canal. It makes a country, healthy, wealthy and progressive.

4. Promoting culture

By globalization, import, export are so easy, so good, the the basic need of trading also. So, In this way people also share their customs, cultures, values, norms and influence others by their special qualities and uniqueness. It has a

great impact on others, makes ^{some} ~~of~~ proud on his culture and traditions.

b. 1- Globalization and human Rights:

set back : Every Picture has two sides; The other side of globalization: **Devaluating a country's currency**

By the mean of globaliza-
tion trading in a fixed
currency, makes the other
countries in difficulty. It
decreas or devalue their
own currency, in such ways
the trading in a friendly
mood or good terms is
just like far away to reach.
Now it became a compulsion.

Single currency trading means
a way of capitalism, which
is a major de-value aspect
of globalizations. feels someone

inferior or may other feel superior, which directly moves the violation of human rights.

2. Hindring in health and Education:

If a country with low GDP become victim of any epidemic or victim of a virus, it would be a great challenge to overcome its circumstances, but on the other side developed countries has no problem to overcome such situations. There are no specific facilities and not able to bear the expencies of treatment and the cure of diseases like cancer, and so others.

Like-wise issues in Educational department, are being facing

By students. Recently an incident held in Afghanistan, an abrupt change in flowing stream of education of students came and hundred of students have to come back to their countries.

Some issues are going to be held world-wide, somewhere they become the heading of news and some rest are being suppressed due to obstacles. Carrier of hundred of students is going to be abolish. No one asking, why?

3. Facing technical barriers

Developed countries and developing countries are at so far distance in field of technology and Intelligence. It's just like a cold-war among a weak and a health person.

One cannot compete and other is not willing to share power. They just had their own coin. So, in this case the developing and third-world countries are facing barriers to compete in the age of revolution and the field of science. The field of science and technology development means the big revolution in industry, the colonial mind doesn't ^{even} want to see the developing countries to come in this field, so, too many cases are going through the eyes in world wide, that a person having some unique ability or capacity is missed, gone, fired, picked-up, wanted in anonymous case, and so on.

4. Threatening to identity or culture.

This globalization is just damaging a country's culture.

and custom, norms, and values.

Like there's was huge difference b/w between eastern and western culture, but now a days, it seems the both influence each other and have lost their identity. Besides,

Sovereignty is also threatening by globalization, sharing borders using treaties, using assets and then criticise them is just looking very difficult and miserable and poor side of crown of time. They just spoil and violate human right and having no justice for others. There's no rule of law, as the above board all of law and rules..

• Conclusion:-

As everything has its own pros and cons. And

globalization has some good and bad effects on societies and countries, there is no difference but a lot of difference.

there is no war, but cold war proxy war.

There is competition, everyone is equal but there's colonial mentality also present.

There's no discrimination but there is single currency trade having and enjoying authority.

There's respect and feelings are present for everyone equally job opportunities for everyone but respectful for elite and rest for lowers.

Although it ~~effect~~ human life but has a great importance also. A lot of problems may solve by this. There's diverse international organizations and NGOs for helping people, solving their problems, encouraging others, understanding and solving problems. Helping each other.
