

Dos and Don'ts for General Science & Ability Paper

Part - II

Question - 2:
(a)

Answer: As technology has changed all the aspects of life,

1. A 5 mark part requires at least 2 and at max 3 sides of a paper. Know that there can be two or three parts of a question and their marks are divided accordingly. So, address all of them in a just manner.

2. Focus on time management. You get 35 minutes to solve one question and about 8 minutes per 5 mark part. Manage your time accordingly.

3. You need to understand that your paper is supposed to look more scientific than theoretical. So, add flowcharts and diagrams where required.

4. Your handwriting and neatness can be really impactful. Avoid cutting and overwriting.

5. Focus on your spellings and your grammar. Here, in GSA there's no deduction in marks but your expression will definitely create an impact.

6. In ability portion, give explanation for analytical ability question in words. You need to understand that a 5 mark part requires all steps written and explained.

Good luck for CSS 2025. You're gonna rock in sha Allah. :)

(b)

Answer:

CPU is called brain of computer and it works similarly like human brain.

Data processing: CPU process the data and instructions sent by software. Human brain process information sent by sensory cells.

Controlling: CPU controls computer working and brain controls body.

Memory management: CPU manages memory in RAM and brain keeps memory in short term and long term.

Data Transfer: CPU transfers data to the parts of computer and brain sends it to glands, hormones and organs.

Therefore it is said that both work in similar manner.

(c)

Answer:

Balanced diet:

A balanced diet is the diet that fulfills the nutrient requirement of the human body and protects against diseases.

"Let food be thy medicine."

(Ancient greek Proverb)

-Deficiency of Vitamins and irregularities -

Vitamins	Irregularities
Vitamin - A	Night blindness
Vitamin - B	Beri Beri
Vitamin - C	Skin diseases, Scurvy, gum bleed

(d)

Answer:

Optical fibers:-

Working method:

Fiber optics work under the phenomenon of internal reflection. Light travels from the one end of the wall to the core of cable. This light bounces off the walls of cable repeatedly.

~~GPS: Global positioning system is a satellite which provides information about locations through navigation. This is US owned system.~~

Measurement of 2D and 3D locations:

Satellites work on triangular or tetra-angular principle. First the location is detected the information is shared to the location centre, which finds out the position of the person on earth.

Explain properly

Question- 4

(a)

Answer:

Bile:

Bile is a juice created by

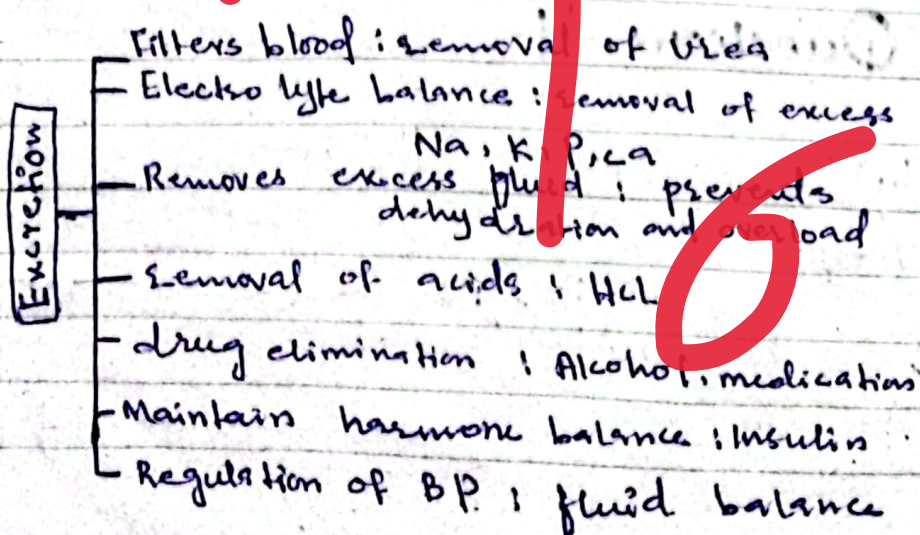

liver and stored in gall bladder^{er}.
It plays role in digestion and absorption of fats and fatty acid into smaller components.
Liver produces One litre of bile daily. When food is sent to small intestine liver releases bile through bile duct into small intestine. Bile is responsible for different colors of human faeces.

(b)

Answer:

Role of Kidneys in Excretion:

Kidneys plays significant role in excretion.

(c)

Answer:

Forms of Solid waste management:

- ① Reduction: Solid waste production should be reduced so solid waste management ^{can not} should not be a hazardous issue.
- ② Reuse: Instead of plastic or paper products reusable products like steel glasses, plates, cloth bags should be made compulsory to use.
- ③ Recycle: Waste material should be recycled so energy and environment should be saved.
- ④ Waste to Energy production: Solid waste can be turned into energy sources. For example solar plates can be made from those wasted products. Appliances can be made.
- ⑤ Landfills: The non reusable

material can be ~~thrown~~ buried inside the land for decomposition. The process should be done in non-residential areas.

(d)

Answer:

(i) Anemia:

Anemia is a disease caused by the deficiency of iron. In this condition RBCs are reduced than normal level.

(ii) Appendicitis:

This is the condition of inflammation of appendix, a small organ attached to the large intestine. This causes severe abdominal pain and nausea and leads to the removal of appendix.

(iii) Spleen:

Spleen is a purple and reddish color organ on upper left of abdomen. It is responsible for filtering of the

blood and storing RBCs.

(iv) Myopia:

It is disease of near-sightedness. In this near objects are clearly visible but distant are blur.

(v) Isotones:

Isotones are the atoms which have same number of neutrons but different number of protons in nucleus.

Section - II

a)

Data:

Toy blocks = A, B, C, D

Ratio = 4:7:3:1

Difference between A and C : 50

We know that solution:

A = 4 and C = 3

$$\therefore 4 - 3 = 1 = 50$$

By multiplying 50 to all ratios we get :

$$A = 200$$

$$B = 350$$

$$C = 150$$

$$D = 50$$

So the number of

$$\boxed{B = 350}$$

Answer

(b)

Data:

Original cost = 80 \$
discount price = 15 %
Sales tax = 10 %
Final price = ?

Solution:

first we will find discounted price

$$\begin{aligned} &= 80 \$ - 15 \% \\ &= 15 \% \text{ of } 80 \$ = 12 \$ \\ \therefore 80 \$ - 12 \$ &= 68 \$ \end{aligned}$$

Now will apply sales tax on the discounted price.

$$\begin{aligned} &= 68 \$ + 10 \% \\ \therefore 10 \% \text{ of } 68 \$ &= 6.8 \$ \\ \therefore 68 \$ + 6.8 &= \boxed{74.8 \$} \text{ is final price} \\ &\text{Answer} \end{aligned}$$

(c)

Data =

Distance = 42 km

Speed = 36 km/hr

Departure time = 4 pm

Arriving time = ?

Solution:

If the train's speed is 36 km then in 1 hour 36 km will be covered.

$$= 42 - 36 = 6 \text{ km}$$

If 36 km distance is covered in 60 minutes, then 6 km will be covered in 10 minutes

\therefore 4 hr + 10 = arriving time

\therefore Arriving time = 5:10

→ Answer

(d)

(i) Keninsuperted:

Superintend

(ii) hweti:

¹⁻
White

Question - 7:

(a)

Data:

$$V = ?$$

$$R = 30 \text{ cm} = 0.3 \text{ m}$$

$$H = 1 \text{ m}$$

Solution:

$$V = \pi r^2 h$$

$$\pi r^2 = (0.3)^2 = 0.9 \text{ m}$$

$$V = 3.14 \times 0.9 \times 1$$

$$V = 3.14 \times 0.9$$

$$V = \boxed{2.826} \text{ Answer.}$$

Volume of cylinder = 2.826 -

(b)

Data:

Average age of 3 boy = 15 y

Ratio = 3:5:7

Age of youngest boy = ?

Solution:

IF average age of 3 boys is 15
then total age = $3 \times 15 = 45$

By ~~multiplying~~ ^{dividing} total age with the ~~number~~ ^{average} age we get

$$45 \div 15 = 3$$

we will multiply ratio with 3 to get age of the boys

$$(3:5:7) \times 3$$

$$= 9, 15, 21$$

\therefore The age of youngest boy = 9 years
Answer

(c)

(i) 8, 19, 52, 151, 447

8, 19, 52, 151, 447 is right

\therefore the wrong number is 447

(ii) 11, 13, 17, 19, 23, — .

11, 13, 17, 19, 23, 25, 29, 31, 35...
