

3 Day: MTWTFS Date:. gall bladder to release the concentrated bile To complete digestion. 2. Gastin and Secretin also showed bile secretion. 3. hack of bile salts in the entershepatic circulation Stimulates bile synthesis and secretion. FUNCTIONS OF BILE JUICE a) Digestion and absorption of fats Bile juice plays a crucial rule in the digestion and absorption of tats. It breaks down field into smaller particles, making it easier for digestive enzymes to further break them down This process called Emulsification allows for efficient absorption of fats and fat soluble vitamins (A, D. , and k) in the small intestine b) PH balance and antimicrobial effects Bile juice helps maintain a healthy PH balance in the intestines, which is essential for proper digestion and the growth of beneficial gut bacteria Additionally bile juice has antimicrobial properties, which help prevent growth of harmful bacteria

Date:__/_ and other microrganisms in the gut 3. Excretion of Billinubis and Cholestul Bile juice also plays a sub nothe elimination of Bilisubin, a waste poduel, and help remove excess holestrol from the body * == PERTB Discuss the role of Kidney in excretion A pair of kidney is present in our body for the excretion of wask products. Its weight is less than 1% of the total weight of the body. 20% of the blood during each heartbeat is supplied to the kidney. Unive is produced by the kidney and it also contains the waste products of metabolism (salts, water, toxins) that end up in the blood. The kidney and Urinary track filler and eliminate these waste Jubstances from our blood. Without the kidneys, wasto Products and toxins would soon build up in the blood of to dangerous levels.

Day: MTWTFS Date:___/__/_ HUMAN EXCRETORY SYSTEM Rend artery Kidner theters Urinary bladde urethe NEPHRON The Structural and functional unit of kidney Nephran helps Remove Waste Products from the body. Nephron about 2 million tiny tubes has a Well specific zed structure to facilitate excretion along with secretion and absorption. Collecting Duet Boumon copsule Disket Convulcte Proximual Jubule Tubule LOOP of Here

Make diagram of nephron to explain properly

Day: MTWTFS WORKING OF NEPHRON 1. Filtrationa Blood containing wasto products enter into Glomenulus Due to high blood pressure of glomenulus, blood is filtered here Blood cells and proteins remain while glucuse. usea, unic acid and some important Salt are kiltered and passed to proximal tubule. 2. Reabsorption Fill the useful constituent of filtrate like glucose, salts and water is absorbed in Proximal loop of Henle and distal part of nephron by the per abular capillaries 3. Secretion The inner layer of neptren also seriese nitrogenous waste products into launa of nephron 4. Elimination The wasts products from the distalpart into collecting duct which enter into palvis From pelvis, these enters in Ureter, then stored in Uninary bladder or some time and from these excreted outside through Urething. *

Ð Day: MTWTFS Date:___/ PARTC Discuss different methods of solid wask management UNDERSTANING THE WORD SOLID WASTE activities, that is abandoned as unwanted and useless is called solid waste. Generally it is generated from industrial, residential, and commercial activities in a given area and may be handled in a variety of Ways. SOLID WASTE MANAGEMENT Solid wasto management is a critical aspect of environmental Hygience. It refers to the process of collecting and treating Solid wastes The systematic management of the generation, collection, the fer treatment, Securcing, Securery and disposed of Solid wasto is solid waste management Collection Disposal Processing Trans Portation D

Day: MTWTES

(8)

METHODS OF SOLID WASTE MANAGEMENT a) Solid Waste Open Dumping 9+ is the open dumping of the waste as practised by the general public. However in the present scenario of the ectening climate change and global warming, it is not a Switchle method and should be avoided. 6) Sea Dumping process: This see dumping can be carried out only in wastal areas. This is very custly procedure and not environment friendly c) Solid waste Sanitary landfill 97 is a simple, clean, and effective process in which layers are compressed with some mechanical equipment and covered with earth levelled, and compacted. A deep trench of 3 to Sm is excavated and microorganisms act on the organic matter and degrade them. d) Incineration method This method is suitable for combinity Repuso High operation cash and construction are involved in this procedure. This method is suited in crowded cities where sites for landfilling are not suitable

Day: MTWTFS Date:_ 5. Composting process Similar to landfilling, this method is popular in developing countries. Decomposable organic matter is separated and composted in this proceeding freeds are stuble and products and good oil conditioners. They can be used as base for fertilizers. 6. Salvaging procedur. Materials Such is metal, paper, glass, egg, certain types of plastic and so an com be salvaged, ecycled and reused. Following these procedures can help to manage solid wastes. Part D) Depino the terms 1. ANEMIA Anemia is generally defined as loss of blood. It is a problem of not having enough healthy red blood cells or haemoglobin to cany oxygen to the body tissues. Haemiglobin is a protein found in red cells that (anies oxygen from the lungs hat other organs in the body. Having anemia (an cause tiredness, weakness, and Shortness of broats Shortness of breaty.

(10) Day: MTWTFS Date:___/__/ ii) APPENDICITIS Appendicitis is an inflammation of the appendix, which is a 31/2 inches-long tube of tissue that huns from large intestine on the lower hight side of the body. Certain conditions can be the cause of appendicitus Such as overgrowth of barkeric, in yout instestine, hardened poop, Colitis, or infection from Parasites. It's a milian Sungery which almost & guines sungery to remove the appendix, however, even if it is removed, people Can live fine in) SPLEEN Spleen is a part of lymphatic and blood System which is inside left rib & so just above the stomach. It haps to filter the blood to destroy micro organisms and get rid of damaged hed blood cells. in) MYOPIA Also known as near sightedness is an eye order. It is the condition in which near objects are seen clearly but distant objects are not seen clearly. It can be treated using concarelent J SOTONES grotones are the atomic species that have the same number of neutrons

Day: MTWTFS Date: __/__/ but different number of preting. Oxygen 80 P=8) (21=8) Nitrogen 'N P=7) (n=8) Oxygen n=8QUESTION NOS PART A Pakistan is the fifth most populous country of the world. What are the causes of population explosion in Pakistun? What can be the Control measures? In 2023, the population of Pakistan was 240, 485, 658, while the Current population of Pakistan as of July 2024 Ps 245, 279, 497 as per the seports of Worldometer UNited nations Data". Pakista previously on 6th position as the most populous Country has now ster jumped to the fifth position which replacts that Pakistan population in increasingly at an alarmingly Rate Patistan population equivalent 2.99%, of the total world population is like a ficking bomb that can explode anytime

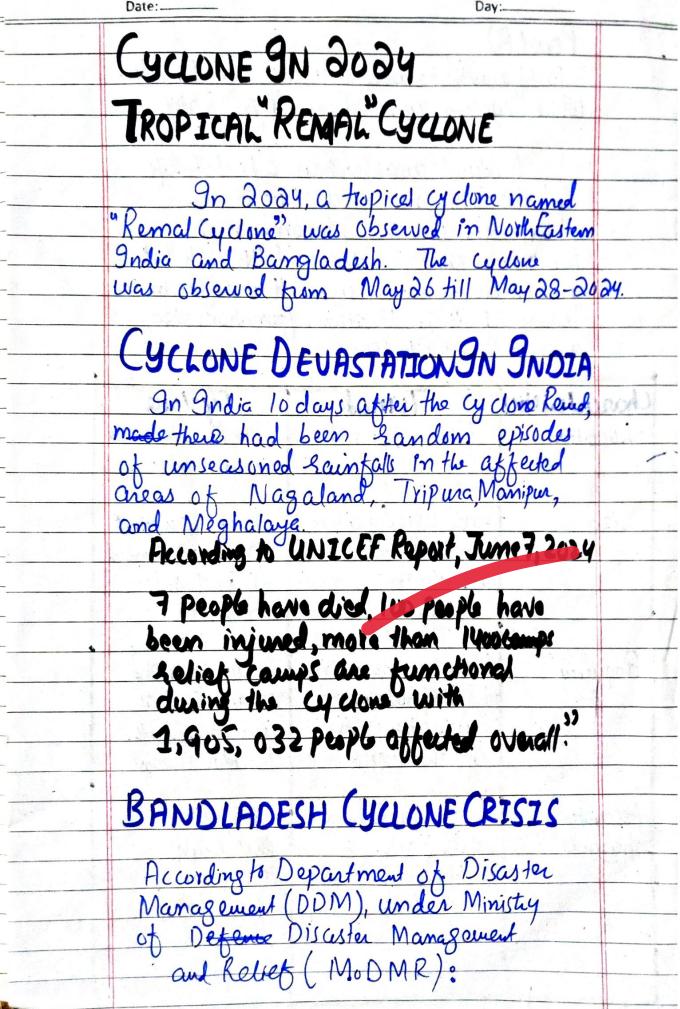

Day: MTWTFS Date:__ Population explosion is a bigger problem which gives birth to many other problems such as unemployement, Sanitation Problems, Water and energy cisis, and environmented hazends. CAUSES OF POPULATION EXPLOSION G. GULTTERACY, CULTURAL TABOOS AND GNACCESSIBILITY TO FAMILY PLANNING The Population Council of Rekiston estimated : 35.4% of women in country c currently practising conacconception and more than of of manica women want to plactice controception to limit their family size but are unable to doso? This is mainly because of wides pread illiteray Cultural Choice Faboos, and inaccessibility to high quality tamily planning. There seems to be some kind of aversion to this matter W LIMITED (HOICE OF METHODS

Day: Date:. In gural areas, there is shortage of modern contraceptive like condoms, pills and juplants. c) PATRIARCHALSOCIETY Patistan is a patriarchal Society where men often mala decisions about family planning, and women may have limited autonomy about their own Reproductive health. D) RELICIOUS CONSTRAINTS Some heligious groups in Patistan deem family planning programs as against the tenets of Islam and therefore a project ouch heligious containes make it challenging for the government to implement effective population control Policies-CONTROL MEASURES (a) STRONG FAMILY PLANNING PROGRAMS The government should make a commitment to treat this matter as top priority of -the nation as if hampens the socio-economic development Specially in poverty striken State like Pakistan, there is a wider to address this issue. Family Programs Should enlighten the poor specially that bearing more children

Date: Day Will further afflict and deteriorate their State of Poverty 2. SET UP POPULATION PLANNING UNITS 9N HEALTH SECTORS All private maternity homes and health departments should set up Population Planning units on their prenses as it is the duty of all privato commercial enterprises to protect the interest of society cd large Private media too Should j broadcast such programs. 3. ENDORSE CONTRACEPTIVE METHODS These methods enable health spacing of pregnancies, and should be endorsed fully. support perhansling gnerean education ind hunger 6 family -----Plan nine Jave. Smallen HIV AD

Day: Part B) Differentiate b/w Cyclones and Tornades: Which cyclone was observed in 2024 Natural disasters are a factof life, and two of the most destructive and dangerous weather phenomena are Tornadoes and Cyclones. Although both are interchangeably used, they differ in terms of their location, formation, size, and their splife span. Form over warm Characteristics Tornado Form overland Location ocean waters harge, So we find spanning hundred Small, usually a few hundred feet to Size of miles in dameter a mile in diameter More common in Occur in tropical Hequency Regions Such as the US, but can Indian & South occur in other parts Partie Oceans of the world Strong Winds Leavy Strong Wind, Associated heavy hains rain, hail, hazands lightning E tabric debris storm Sunges E flooding

Date:

16

Day Date: About 4.6 million people was affected by Cyclone ite of in 19 districts, 6 16 people di d across 7 districts. 8,07,023 Pape evacuated, or 173,000 houses damaged More than S30,000 formers been off used by crop damage work BDT 10, 595 million" Pant c) How earthquale occurs? How many people died in Turkiye's earthquake in 2023? What was the intensity of earthquake on Richter Scale with jolfed Turkiye? EARTHOUAKE An earthquake is what happens when two blocks of earth suddenly Slip past one another. The surface where they slip is called "Fault / Fault plane". The location 95 called Earth's Surface where the Starts is called "Hypocenter" below the earthquake Starts edy above H and the location dis On the surface of the Earth is Called Epicenter

Day: Date: -Fcult line Epicenton Hypocenter HOW EARTHQUAKE OCCUR? The earth is composed of three layers, Core, Mantle, and Crust. The crust Engl top of the manthe make up a thin stin on the surface of our planet Crustof the Earth is made up of huge blocks that fit together. These blocks keep slowly Moving around and bumping into each other. They are called Tectonic places, and the edges of the plates are Called the Plate boundaries. The plate boundaries are made up of many faults, and most of the carthquetes faults Since the edges of the plate while are rough, they get that while Keep moving. the rest of the plater Finally, when we plate has moved for enough, the edges unstick on one of the faults and it causes lastly whe Why does the Earth Shake?

19 Date: _ Day: The energy stored up which causes the blocks to slide past one another hadiates outward from the fault in all directions in the form of "Seismic waves" like hipples on a pond. The seismic waves shake the pEarth as they more through it and when the waves space the Earth's Surface, they shake the ground. Faultline Earth's crust Epicenter ectonic plates Hypocenter Earthquate Diagrom EARTHQUAKE 9N TURKIYE On Febb 2023, a magnitude 7.8 earthquite Occured in Southern Turkey near the northum birder of Syria. It was followed by approximately 9 hours later by another earthquake of magnitude 7.5 located around Squites to the Southwest

Day: Date:. NUMBER OF CAUSALITIES According to Wikipedia, dealy foll in Turkiye on contiguate was 53, 537. JNTENSITY a) first shock = 7.8 b) Second Shock=7.5 Cus recorded on Kichtersceles. Part d) Define the following terms Hypocenter: The point on the Earth's surface vertically above the tocus. It is the point where ain earthquake Stapture starts. It is also called tocus because earthquake 1. 2. Epicenter? The point at the A point vertically above the focus on the surface of the Earth 97 is the point where facilit expluse (commences, producing an earthqueke Eye wall of the hurricone 3. The most dangerous and destructive part of a tropical exclore is the provincione: eye wall. It is the most

21 Date: Day devastating lagion of hurricano. Must danging winds and intense rainfall is found here SECTION IT: Ability pertion QUESTION 7: Parta) Find the volume of a cylinder with radius 30cm and height Im Solution: Radius= 30 cm $\frac{3\theta}{10\theta} = \frac{3}{10} = 0.3 \text{m}$ Height = 1m Formula of Volume of Cylinder Tr2h $Volume = 22 \times (0.3) \times (1)$ 09 22 x 0.09 x1 VOX 0.2821 0.09 22 × 0.09 22.0 0.09 1.98 22 018 Volume= 0. 282m3 J1.98 0.282 14 58 Part B) The average age of three boys 15 15 years. If their ages are in the ratio 3:5:7. 56/20 in the scotio What is the age of youngest boy?

Day Date: Solution Let the fatio be given Ratio be n 3:5:7=> 3n Sn Fn Average= 3n+Sn+7n=N. 30 14 15 = 15n3 45= 15n 345 = n n=3 age of youngest boy= 3x3 Egyeons Hence, the age of youngest boy is gyoons Parte) I dentify the series 1) 8, 9, 52, 151, 447 11, 13, 17, 19, 23 what is wring with ü) thes series? Parta) 9 & a triangle has sides of Scm, 4cm, and 6cm. What will be each angle? (ALA) 6cm Sam

Date: Day: Q6 part d) Arrange the jumbled words i) Teninsuperted The correct word is Superint uded Hweti ii The correct word is "White *
