Artificial Intelligence is not all evil — it can Promote Social Good, too

Outline

1 Introduction

    a. Hook: During World War II, Countries created "Atom Bomb" to increase their military might but it brought peace.

    b. General statement: Technology it self is not ~~bad~~ evil at all. It becomes evil when one uses it in unethical way.

    c. Thesis Statement: Because Aritficial Intelligence has the potential to promote different social goods in the form of better agricultural sector, health setor and other, I doesnot make it evil at all.

2. Understanding the Artificial Intelligence

    a. Self learning Ability of machines

3. Due to AI current issues faced by the world their make AI Evil.

    a. A Race among super powers to Increase their Military Might.

        • US-china war on semicordutors

        • Iran - Israel clash

        • Humen Agency by AI

        •

    b. Political Parties are using Artifical Intelligence to promote the populist

and Extremist Ideas

- Rise of Hindu Nationalism and fall of Democracy in India

- Fake Accounts problem in Pakistan

- Eclection of USA

c. Due to unethical use of ~~Att~~ AI, It is creating problems in Education Sector
   - Plagrism
   - Reduces self effort
   - Reduces Attion Time span
   -

d. Overall impact of AI on the socities.
   - Belivong on fake New without checking its authencity
   - Personal clash due to political. Belieues
   - Other Social problems.

4. Steps Should be taken to Adress above Challenges of AI

   a. Restrict its use in Military Affairs
      - AI should not be allowed to do Human's Agency
      - Words of Antionio Guetress

      - multilateral Legislation
      - ~~state~~ en

b. Introduce AI related legistration with the Kelp of Exports
- US and other Countries.
- Pakistan AI Act 2023
- Make It Sebor
-

c. limit the use of AI in Education Setor
- Train Teachers
- Introduce AI Tools in educational Institutes
- Teach students about the ethical use of AI
-

d. ways to reduce the Negative. Impact of AI on Soutres.
- Educate people.
- AI is future. It cannot ignored.
- More positive Impats, on education, health etc
-

5 Other Social sectors where Artificial Intelligence P can Promote "Good" rather than Evil.

a. Agricultural setor
- High yiecel in agriculture sector.
- water saarcty problem can be solved.

b. Education setor.
- Reforms on Education Setor.
- self learning opportonitics.

c. Firance setor
- Aelpful to stop terrorism financg. in Palist
- Money Laundering. Issues of Pakistan.

d. Global warmty

6. ## Conclusion

Aritificial Intelligence is not all evil - it can promote social good, too

During world war II, western nations were in the race to built atomic bomb. So, they could occupy other nations by their military might. However, when USA used its atomic weapon on Japan's two cities " Hiroshima" and Nagasaki, in 6, August 1945 and 9, August 1945 respectively, it realized the world that if these tools were purposefully used by the world then they would take no longer to take this world towards its final end. After realizing this threal, the leaders of different nations like USA, United kingdom and other sat together and decided to figure out what could be the ethical use of this destructive weapon. Finally, they figured out its ethical use and decided that it should be used to defend the boundaries of country. So is the case with Artificial intelligence. Although, increasing unethical use of AI has opened the new door of problems for the world in the form of human Agency, political polarization and other. But, taking right actions to solve these issues could be helpful for the world. Moreever, promoting AI in different ~~educati~~ sectors of education, health can help the world to reduce its evil effects and promote the good oppertenitics for the world from Artificial intelligence.

Before discussing good and evil effects of AI, one has to understand its workings. AI is is the self learning ability of a machines. Before the introduction of Artificial intellinue in machins, the ability of machines was only limited to few dimensions. However, when AI's intelligence was installed on machines, it increased that their capacities to an extent where they started working like human, and thinking like human. Today, the AI has reached at that level where it is considered to be grown more intelligent, more efficient, nd more smarter than the humans. In brief, Artificual enbelligence has opened in debate in international community regarding its effects on the social life of people and on people's personal life.

Different experts of the world present their opinion regarding the issues that how Artificial is going to be root cause to promote evil ideas in the world.

First evil comes from Artificual entelligence that it is going to be used by the military in increase their strength. As a result, the developed nations of the world are in the race to collect more resources to build their AI power. This exactly what is happening between usa and ching. Both countries want to increase their AI capacity so, they increase their influence on the world though their strategic approach. Semilarly, AI's use in missiles or missiles deleting technologies

lead the countries to easily penetrate on
each other's boundaries. For instance, in recent
Iran's - Israel clash, Israel breathed the inter-
national law of boundaries due to his confidence
on his self defence which is mainly built on
AI or artificial intelligence. Along with that,
due to its increasing use by militaries there are
more chance of human agency which can be a
complete violation of human rights considering
their privacy right. In short, if this technology is
rapidly used by the militaries without any legistation,
then there are more chances that human rights
will be violated.

Other factor that makes Artificial intelligence evil
for the world is its increasing use by political
parties to promote their populist agenda. No doubt,
that its increasing unethical use by the political
parties is taking the nations of the world to
models ratio extremism. For instance, During
upcoming election's compaign in India, the BJP under
the leadership of nationalist Narrender Modi, their
supporter are using to create Artificial intelligence
technology to create fake accounts to promote
violence in between Hindus and muslims, whose
ultimate benefits are going to by be enjoyed
by the BJP's government. Moreover, the some AI
technology was used in previous American
elections in between Donald Tromp and Henery
clinton to promote popular narrative of Donald
Tromp on social media. In short, AI tool could
be lethal to harm the concept of democracy.

The third level effect of AI can be felt on its increasing unethical use in the sector of education. The main purpose of education to promote increase the personal intelluti intellectual level of students. Despete of doing that AI has become a source of escape for the students, where, they are using AI to bull wrote their Assignments and universities projets without any hesitation. This activity is a pushing them away from the main objective of education. When they well take help from AI even is small issues academian issues, it would be empossible for them to work on their creative ideas.

Lastly, if one has to observe the overall effets of AI on the social life of people, they are also numerious. It is peace that is very essentral to create a prospour society. But, due to absorbing vast level of knowledge which is promoted with the help of Artifical intelligence, the people have become entolerat regarding eachother's political views. Morever, this effect could easily be observed in young children who remain away from their childish thoughts. According to the report of Gulp which is a international agency, work for the welfare of people by their research, About 48pc of girls who are adolsecant are facing the issue of Anxiety, and they donot are not happy from the curnt.

situation of their lives. In conclusion, depending upon such tools could be lethal for our next generation.

Evil effects of AI are vast to discuss. The main challenge for the global community is how to deal with this challenges.

First step to deal with Artificial enetteligence's use by the militaries of the world to restrict its use in minimum military domains. Military is an important component for any state to ensure its self defense and increasing its capabilities should be the main priority of the states. However, when these abilities are used at that level where they ~~starting is~~ start ignoring the funda-mental rights of the citizens like human agency it will be a complete violation of citizens rights. In order to avoid that, more legislation is reasuired. and those loop holes must be filled. where ~~AI directly~~ the use of AI directly stand against the cerdian's rights. Same efforts were put by the different countries under the leadership of USA in United Nation General Assembly. In present draft it was made clear by the ▓▓ USA that putting a complete ban on AI is not a way out from the evil impacts of AI because it is also a violation of human's rights. Instead of doing that, world should make legislation to compensate negative impacts of AI. This could be concluded as, putting a complete ban of AI is not a wayout for the countries, instead of taking such action, countries

should introduce required reforms to deal with the evil effects of AI.

To deal with the issues of political polarization, fake news and others, countries should seek expert's opinion while introducing legislative reforms on their constitution. Experts from different social sectors must be invited to present their ideas that how laws should be reformed without violating human rights. This approach is very important to sustain the balance between civilians and the state. If state used their direct approach to legistate the law. There would be it more chances of violation of human rights. Because, approach to the information from the different spheres of life is the basic fundamental right of people. Moreover, If this approach is adopted, there are more chances that instead of being democratic states would start to moves in the coop of autocracy which is will gove authority to democratic ~~nation to loss~~ themselves governements to use their autocratic policies.

~~Coming at another issues of AI on economicusing use in education sector, Lastly, to deal s to~~

Lastly, to stop the evil impact of AI on education sector, it use in education should be comitize do As the world is ~~moving~~ fastly moving towards the era of technology, it is important for the student to keep themselves aware about the use of technology. For that it is important for the students to keep themselves touch with AI. In order to avoid their over depence on AI, universities should encourage their creative ideas. ~~In order.~~ So, students should be encourged.

to that how they can do creative work with AI. In short, Students should be encouraged to do creative work with AI instead of increasing their dependence on it.

In the end, educating people about the ethical use of AI is the only way out for the world to reduce its evil effects and promote its good use. AI is the future of the world and instead of turning blind eye to the future people should train their young generation for it. Before putting complete. a complete. ~~Ban~~ ban considering only one aspect of AI, world has to understand that it can bring different opportunities ~~for~~ in the field of agriculture, education, and other sectors.

There are also more sectors of social life. where Artificial intelligence could be used to promote good rather than evil.

First sector is Agriculture where growing use of Artificial intelligence could be used to increase the yield of crops without wasting much resources. ~~there~~ while growing crops to fullfill the demand of world more ~~natural~~ resources like water, fertilizers and other are waisted. AI has the potential not only to increase the percentage of yield but also reduce the consumption of resources which are mainly required to grow crops. AI has the potential to regulate the ~~the~~ the demand of plants food supply as per their need. Morever, AI has also an ability

too fulfill the water demand of plant according to its requirement. As per experts opinion which was published by Dawn, with the use of AI in agriculture sector about million liters of water could be saved. With the help of AI, countries like pakistan can easly solve their water shortage problem. In brief, AI has potential to reduce food scarcity problem of the world.

Secondly, the AI can be helpful to bring reforms in eduction sector, specially developing countries like pakistan. In Pakistan, where about only 1.7 pc of its total gdp is spent by the governments (world Bank), AI is a oppurtunity for the students to aware themselves about the current requirements of education. According to perraiz Hoddhbhoy who is a well known scientist in the field of physics, Pakistan education system remained unsuccessful to provide a valuty of education. The text book which are printed and distributed among the stodents specially the public sector school doesnot contain fresh unowledge. which constraint students in limited domain. In conculsion, the scenario where governments doesnot not have much amount to finance education of Pakistan, AI is a good way out for the students to built their self learning capacity.

Thirdly, above all of that AI has the capacity to bring reforms in finance setor. ~~finance sectory~~ Finance sector for any country is essential to strengthen its economy. However, In Pakistan finance sector

stands on the road., they can be directed according
to the reauirements. In breef, AI can double
human efforts to reduce the increasing effects
of global warming.

In conclusion, AI could be used as a
tool to promote. social goods by promoting
of ethical use. However, its unethical use
cannot be ignored by the world. To use AI
with its full positive capacity world has to
built the capacity to understand. the working
of AI, for that, leaders of the world need
to cooperate with each other. Instead of
promoting hate., nationalism, extremism and.
other evil objects. AI should. be used.
to solve current issues of the world.
In breef, all that is needed by the world
to create. capacity to understand the
use of. this tool.

"Everything that belongs to
you comes to you, untill
you create the capacity
to receive it"
