

Q.6. Artificial Intelligence (AI) is not all evil - It can promote social good, too.

Ans:

Outline

1. Introduction

Artificial Intelligence (AI), on one hand, poses significant challenges to humanity in the form of unemployment, manipulation of emotions and ~~eminent~~ noticeable threats of wars; However, on the other hand, it can promote social good as it can improve medical field, predict natural calamities and play its role in dispensation of justice and management of disasters.

2. Artificial Intelligence (AI) is an evil

2.1. AI leads to unemployment.

2.2. It can cause unprecedented disparities - both economic and social.

2.3. It is a threat to humans' creativity.

2.4. It can manipulate human beings emotions.

2.5. It exposes humanity to cyber attacks.

DATE: ___/___/___

3. Artificial Intelligence (AI) can promote social good.

3.1. AI can do wonders in the field of medical.

3.2. AI can increase productivity of factories which is imperative for social good.

3.3. It can be helpful in the field of justice.

Case in point: India using AI machines in courts

3.4. With the help of AI, natural hazards and calamities can be predicted and managed.

3.5. In the field of transportation, AI can play a vital role.

3.6. It can ^{also} manage supply chains.

4. Conclusion

Essay:

Technological development has introduced human beings to numerous novel things. Artificial Intelligence (AI) is one of them. AI is a human creation which initially needs data inputs and then on the basis of the data takes decisions. It has revolutionised the world. On one hand, it poses significant threats in the form of mass unemployment, ever and unprecedented social and economic disparities in societies, it also undermines human beings' creativity. Additionally, it, due to its algorithms, can also manipulate emotions of mankind. On the other hand, it can promote social good in multiple ways. Its role in the field of medicine is of significant importance. Similarly, in the dispensation of justice, AI can play a vital role. In addition, AI can promote social good as it can help human beings not only in predicting natural hazards but also in managing disasters. It can increase production of goods which will ultimately serve humanity.

DATE: _/ _/ _

Finally, AI can also support human beings in the field of transportation, supply chains and economics. In short, AI provides opportunities and ^{also} poses challenges to humanity simultaneously.
