## The Essay

Artificial intelligence (A.I) has been a topic of intense debate in recent years. Is artificial intelligence remain bad all time? or is it portrayed as myth? That is a question which will elaborate the thesis statement that; "Artificial intelligence is not all evil- it can promote social good, too. where artificial intelligence has raised concerns about its potential negative impacts, it also has the capacity to promote significant social benefits for the society. Therefore, I firmly believe that it is a myth, Artificial intelligence is evil at all and in reality,

Artificial intelligence can promote social good too in various fields of life.

First, Artificial intelligence has revolutionized the society to its modern level. In medical field, it improved the medical research and diagnosis process. Now Cancer is curable by powered Artificial intelligence. Additionally, A.I can help treatment plans, leading to more effective and targeted care. Furthermore, Artificial intelligence is providing remote consultations in developing countries. It revolutioned the health sector.

Second, A.I is improving education system at advance level. It has driven adaptive learning to enhance learning outcomes and accessibility. It is providing support to the students that they need to identify their learning gaps and achievable goals.
