3) Consequences:

- A) Economically lost
- B) Essential services suffer
- C) Family separation

4) Conclusion:

Brain Drain: Causes and Consequences

Brain drain is the movement of skilled, educated and professionals to other country. For example, ^{like} Doctor, Engineer and Scientist leave their home country and move to another other for better growth and opportunity. A significant portion of people migrated in 2023. ~~And~~ ^{there was} 1.6 million people both skilled and unskilled ~~emigrantant~~ till the 2015. In 2024, Pakistan has seen a sharp rise in emigration driven by various social and economic challenges. This is a significant issue in many developing countries, including Pakistan, where skilled individuals leave in search of better jobs, higher salaries, and improved living conditions. Brain drain can have serious impacts on a country's development, ~~but we don't know why it happens~~. It is important to notice that why it happens and how does it effect the life of young Think Tanks.

One of the main reason for brain drain is economic disparity between developing and developed nations. Professionals often seek higher salaries and better financial security abroad. For instance, in Pakistan, a

doctor typically earns between 70,000 to 120,000 per month, while a doctor in the United States can make over \$10,000 monthly. This vast difference in income pushes the individuals to move ~~abroad~~ abroad.

Quality of life also plays a significant role in brain drain. Developed countries like United States, China, UK, Canada provide better life style, ~~so~~ more clean and secure environment. These factors make such country more attractive and seek talented attentions.

Moreover Political instability is another factor that causes ^{brain} drain. Ongoing issues of corruption, frequently Political changes create an uncertain future for skilled professionals.

This type of situation not only affects individual personal safety but also affects personal professional growth and opportunity. For example frequent strikes, Political violence and sudden change of government policies, ~~may~~ can disrupt the business, health care institutions and education institutions, driving talented people to look for better options for themselves.

The consequence of brain drain is far reaching and impact multiple sectors in society. Economically lost annually because of many talented people emigrate instead of contributing local economy.

Moreover essential service also suffers when skilled and professional like doctors, and nurses migrate, which leads to shortage of staff. ~~They~~ may face difficulties to ~~provide~~ provide better care for residents.

Similarly, when teachers and educators emigrate, the education sector loses its strength, may lead to poor quality of education.

Furthermore, family separation due to migration can weaken familial bonds and leads to loss of cultural identity, as ~~these~~ individuals adopt the customs and lifestyles of new environments.

Brain drain causes many challenges for developing countries which leads to creating problems for residents of that country. Government needs to take some steps to reduce the concept of brain drain for the betterment of their country. Create some opportunities for skilled people like scholarships, improving job opportunities, and ~~transport~~ making educational
