- a) Massive decrease in Tax files,
- b) Loss of Revenue

4. Conclusion

Imagine a tree losing its leaves one by one - Just like that tree, a country grows weaker when its talented workers and professionals leave, creating a gap that is hard and tough to fill. This phenomenon is of "Brain Drain", where skilled professionals leave their home countries in search of better opportunities abroad. The question arises here that why the professionals, who are born, grow up and get educated in a country of a cultural setting think of moving somewhere else to seek their dreams? Among many factors, leading to brain drain, unproductive personal and professional development, degrading work cultures of the companies, compromised psychological health of individuals, disturbed and unstable economic conditions, and a gap in technological advancement are the prominent ones. These contributing factors, altogether, leave remarkable repercussive effects on a country's overall impact on industrial development, impact on organizational development, disruption of country's reputation and effect on economy of a country. Understanding the drivers and repercussions of Brain drain is crucial for addressing the gap this growing challenge that many countries, particularly developing countries are facing today.
