The room was full of delegates from all around the world.

Rheum:

~~EBB~~

"Mr. Thompson, are you seeking compensation for wrongful termination?" inquired the judge. The plaintiff replied, "Yes,"

Your honour. I believe I was unfairly dismissed." Upon considering the plaintiff's answer, the judge asked, "You were let go after eight months, correct?", to which plaintiff very carefully replied, "Yes" so the judge went lightened him by saying, "Under the law, employees with less than a year aren't eligible for relief unless there's evidence of discrimination or a specific rights violation". When he realized, he felt his rights have been violated and the judge told him further that there is nothing that he can do for him. Eventually, the plaintiff agreed that if he is granted any sort of relief it will be the clear violation of law.

—(Ans no. 7)B—

Translated Paragraph

Recently, in a book fare in Lahore, a conflict emerged because rather than focusing solely

on academics and literature, other things like eatables and unnecessary stuffs were also garnering the attention, which eroded the purpose of this very book fair. Many honourable guests were disappointed and felt that book fair has become a food street where less space for books, authors and literary debates is apportioned. Due to unnecessary attention to food stalls, rather than giving the attention to studying and trading of books, a conflictual debate surfaced that whether this event was fulfilling its literary purpose or only economic interests were being promoted.

~~Answer No. 3 B~~

English Comprehension

~~Q.1 B~~

Drought is one of those natural disasters that can be attributed as one of the manifestation of climate change. Drought means lack or no precipitation for a

prolong period of time to such an extent that the once fertile soil becomes barren and there is water left for the cattle to drink and live. Droughts can have very serious consequences on livestock, agriculture, fish industry especially in African and South Asian region. Soil desertification, lack of biodiversity, soil infertility are the consequences of droughts.

~~—dub—~~

No, the writer does not endorse the popular saying about the red sky because he believes that these sayings are usually wrong and if for some godly reason they are right then it is purely a fluke. In fact, he argues that if the men had found it a reliable method to identify weather patterns then there was absolute no need to develop scientific methods to test the hypothesis and scientific instruments like thermometer and barometer to collect the data. The writer

endorsed the scientific mode of weather inquiry rather than relying on myths!

~~div B~~

Weather forecasting is absolutely a science as it involves scientific instruments like thermometer to collect data about the temperature and barometer to collect data about winds. The data collection process is then analyzed through quantitative research methods which gives a prediction about the future of weather in a numerical value. This numerical value is the probability of the event which is likely to take place in the future. The probability of a weather event is usually between 0% to 100%.

~~div B~~

Weather forecasting is one of the most complex forms of research because it involves various independent, dependent

and spurious variables. Which means these variables can influence each other. For instance, a change in one variable will bring a change in a dependent variable. If the humidity rises, then temperature being a dependent variable will also rise. Moreover, sometimes there is direct and indirect relation between two variables. But, the most intriguing fact about weather forecasting is that all the variables are beyond human control which makes weather forecasting very cumbersome.

-EVB-

Initially, when the weather forecasting was not backed by scientific evidence, people used to rely on moon for predicting weather. For primitive forecasters, moon was the god of weather, and it contained a lot of water. So, whenever they used to see a crescent moon and it appeared to them that moon is hiding and is in crescent shape, they would

immediately realise that rain is going to knock on the door anytime soon. People with little or no access to technology still rely on the same old technique of predicting weather especially in rural areas.

-(Answer no. 2) B-

A Pragmatic Approach Towards

World Peace

The nuclear proliferation has made humanity realize that conventional modes of warfare have no space in the post-modern society. The might nuclear bombs have made states almost invincible. Knowing that even a single bomb can cause mammoth amount of destruction, states still spend huge chunks of their GDPs on increasing stockpiles. It is almost absurd to think that armament can bring a sustainable peace. It is absolutely vital for leaders as well as citizens

to give up the idea that deterrence is the viable solution, and should work on a more pragmatic and rational approach towards world peace. Moreover, the desire to bring change in the world should start from within. Therefore, every peacemaker should give up the pessimistic attitude about the fate of humanity and strive together with people for world peace.
