

## 1. Introduction

## 2. Some facts about Global warming

2.01 - Sea level rising

2.2 ~~Impact~~ Reason of climate change

## 3- Cause of climate change

3.1 - Temperature variation

3.2 - Fragile ecosystem

3.3 - land sliding

3.4 - Glaciers melting

3.5 less rainfall / rain drought

3.6 Heavy monsoon rains / Floods

3.7 Coastal Erosion

3.8 Transport System / Emission CO<sub>2</sub>

3.9.

## 4- Consequences.

4.1 Agricultural Industry damage.

4.1.a ~~Health~~ Pest production & its

4.1.b Economy affected less wheat production

4.2 - water scarcity

4.2.1 less clean water availability / water pollution

4.2.2. death species

Date: \_\_\_\_\_

②

4.2.3 Health problems.

- 4.2.4 less crop production & wages.

4.3 → Air pollution

4.3.1 Smog.

4.3.2 Health problem.

4.4 Conclusion

## Introduction

Date: \_\_\_\_\_

Pakistan is frequently exposed to floods and other catastrophic events which made it 5<sup>th</sup> Nation among all, to be badly affected with climate change. According to UN Survey, Pakistan only produced 2% of GHG Emission, but still badly affected because of the faulty practices. These Hazards when combine with vulnerable.

in shape of poverty, political instability and social problems makes the nation more susceptible to it. with a change in climate, has made ecosystem fragile causing water droughts or severe floods, which leads to catastrophic earthquakes, coastal area erosion, causing consequences in Pakistan's agricultural system, Economical issues, water scarcity and Health Hazards.
