

Climate change in Pakistan: Causes and consequences

Outlines:

- 1 Deforestation
 - 1.1 wood industry
 - 1.2 wood for domestic use
- 2 Carbon Gas emission
 - 2.1 Burning fossil fuels
 - 2.2 Old engines
- 3 Heavy rains
 - 3.1. Floods
 - 3.2 third world disasters
- 4 Rise in temperature
 - 4.1 Heat wave
 - 4.2 melting of polar ice

Introduction:

"Fancy cutting
Down all those beautiful trees...
To make pulp for those bloody
News papers, and calling it
Civilization", Winston Churchill.

Date: _____

Day: _____

climate change is the major issue in world as well as in Pakistan. Pakistan has less than a percent contribution in burning of fossil fuel or carbon emission but most affecting country from climate change. wood industry is cutting trees for making furnitures and etc goods, some people are cutting trees for domestic purpose. This is the main factor for climate change and heat wave from past few years. Heavy rains due to climate change has destroyed our crops which leaded to wheat shortage in 2022. climate change may also be a alarming for increasing sea level. which happening due to melting of polar ice. Pakistan need to take serious steps

To counter climate change and
Brief rest of world to take
Serious steps to save world
from this disaster.
