d- Community centres to bridge the gaps between people and state.

(5) Conclusion.

Overpopulation is a pressing issue that affects every corner of our planet. Imagine a world where every inch of land is crowded, resources are stretched to thin and environment is suffering. With the global population projected to reach ten billion by 2050, we are facing challenges that threaten our future. This illustrates how overpopulation is an intimidating demand to the global community. Population is significant for every country for its survival. However, overpopulation has many impacts that exacerbates the situation. Some of the impacts of overpopulation are food shortages to lack of health care infrastructure and shelter. Along with it, a fewer opportunities will increase ^{the} crime rate. Besides this future generation may become a liability to the country because of more out of school children and lack of training mechanism. More people will demand more share in resources leading to water scarcity and energy shortages. That will lead to increase in socio-economic conflicts. Nevertheless, every problem has a solution and overpopulation is of no exception. Promulgated pragmatic measure the impacts of overpopulation can be slow-down. Which are spreading awareness

through religious and intellectual people eliminate the misconception about contraceptives. Together with, children are the future of any nation by enlightening them through proper education will reduce the fertility rate. With that-encouraging youth that adopting a child doesn't make them a lesser parent. Albeit, Overpopulation is a threat to the world's stability. As it will increase the food insecurity, crime rates, climate threats, resource depletion, homelessness and displacement. However, through pragmatic measures this can be slow-down to the minimum.
