

1. Introduction

2. Some facts about Global warming

2.1 - Sea level rising

2.2 ~~temper~~ Reason of climate change

3- Cause of climate change

3.1 - Temperature variation

3.2 - Fragile. Ecosystem

3.3- land sliding

3.4- Glaciers melting

3.5 less rainfall / rain drought

3.6 Heavy monsoon rains / Floods

3.7 Coastal Erosion

3.8 Transport System / Emission CO₂

3.9

4- Consequences.

4.1 Agricultural Industry damage.

4.1.a ~~Health~~ Pest production & is

4.1.b Economy affected as wheat production

4.2 - water scarcity

4.2.1 less clean water available / water Pollution

4.2.2. death species

4.2.3 Health problem

4.2.4 less crop production & wages

4.3 → Air pollution

4.3.1 Smog

4.3.2 Health problem

4.4 Conclusion

These are
consequences.
Mention
causes
properly

Introduction

Date: _____

Pakistan is frequently exposed to floods and other catastrophic events which made it the 5th Nation among all, to be badly affected with climate change. According to UN survey, Pakistan only produced 1% of GHG Emission. but still badly affected because of the faulty practices. These Hazards when combine with vulnerable.

in shape of poverty, political instability and social problems makes the nation more susceptible to it.

With a change in climate, has made Ecosystem fragile causing water droughts or severe floods, which leads to catastrophic earthquakes, coastal area erosion, causing consequences in Pakistan's agricultural system, Economical issues, water scarcity and Health Hazards.
