2.5 Solutions :

2.5.1 Promote Education

2.5.2 Government Policies.

2.6 § Conclusion.

Introductory Paragraph:

Every second, the world's population grows but are we prepared for the consequences? Overpopulation is the state whereby the human population rises to an extent exceeding the carrying capacity of the ecological setting. The world's population has grown at an unprecedented rate over the past century, reaching over 8 billion people in 2023 and continues. This rapid increase presents a critical challenge that impacts every aspect of life on earth. While in all these, Pakistan is also facing this situation with a population exceeding 240 million people, Pakistan is the 5th most populous country in the world, and its population continues to grow rapidly. Overpopulation in Pakistan is a real threat to its economy. It creates issues such as poverty, unemployment and environmental

degradation, while staining the nation's infrastructure and social services. As Pakistan is dealing with these crisis, it becomes clear that sustainable solutions including family planning, educational initiatives, and economic development, are essential for securing Pakistan from this rising monster.
