Industrial Revolution started in England giving economical rise to England but it also brought climate change which eventually effected the whole world, especially developing countries including Pakistan.

Pakistan is one of the major victims of climate change, where almost 22 million people suffering from respiratory diseases, <sup>faint</sup> extreme weather events like floods and heatwaves.

Moreover, about 40% of the population in major cities like Lahore and Karachi are exposed to harmful levels of pollution (Green space southeast asia) ~~2020~~ report.
