

Climate Change in Pakistan Causes and Consequences.

Brainstorm

Causes

- Deforestation
- Urbanization
- Over population
- Burning of Fossil Fuel.
- Floods.
- Food Crisis

Consequences

- High temperature
- Environmental
- Melting glaciers
- Heat waves.

Main Body: Causes

1. Deforestation

- (a) Cutting of forests
- (b) Effect wildlife

2. Urbanization.

- (a) Population shift from rural to urban areas
- (b) Poverty.

3. Overpopulation

- (a) Unemployment
- (b) Lack of housing.

4. Burning of Fossil fuels.

- (a) Air pollution
- (b) Water pollution

5. Floods

- (a) Loss of human life
- (b) Property and infrastructure damage.

G. Food Crisis

- a Poverty
- b Conflict.

Consequences

- 1 High temperature
- 2 Environmental consequences
- 3 Melting glaciers
- 4 Heat waves

Outline

Introduction:

"We are the first generation to feel the impact of climate change and the last generation that can do something about it" (Barack Obama). Climate change in Pakistan is a major problem that affects human health and their lives. It is affecting every individual's life. Climate change in Pakistan is caused by human activities and natural factors including deforestation, Urbanization, Overpopulation, Burning of Fossil fuel, Floods, and food crisis. It has high temperature, environmental, Melting glaciers and heat waves ~~the~~ consequences.
