The Essay

Day: _____

In many developing nations like Pakistan, numerous skilled professionals like Dr. Merium found themselves standing at a crossroad. Despite years of education, rigorous training and a passion to serve her community, she found herself in the midst of overburdened healthcare system, economic uncertainty and increasing social and political unrest. The prospect of an uncertain future compelled her to seek greener pastures abroad. Her story holds a mirror to the countless skilled individuals who were forced to migrate in the search for a better future. In the globalized world, brain drain has become a growing concern, particularly for developing nations where the migration of skilled professionals can severely impact economic and social development. The idea of brain drain is often regarded as a "zero-sum" game, where the gain of one nation is equivalent to the loss of another nation. According to a survey conducted in Pakistan, 37% of the population expressed a desire to leave the country. The phenomenon of brain drain, primarily
