3.5. Decrease in investment in education and training

4) Conclusion:

4.1. Thesis restated

4.2. Concluding thoughts

4.2. Summary of ideas presented

4.3. Concluding thoughts

The Essay.

Why is the number of highly skilled individuals leaving their home countries increasing by the day? This emigration of highly qualified people is called brain drain. This is most common in developing countries where the qualified people leave for other developed countries in search of better opportunities, higher salaries etc. The factors that are driving them out of their home countries are political instability, lack of job opportunities, among many others. Due to this emigration, their home countries are facing consequences, such as loss of skilled labor, discouragement for investors, reduced tax revenue and much much more.
