5.1 Summary of key points.

5.2 Call for a national policy to retain and utilize human capital effectively.

5.3. Emphasize:

"Nations that lose their minds, lose their futures."

QUIZ NO: 1. ESSAY WRITING

THE ESSAY

1. INTRODUCTION:

"The flight of human capital is the silent theft of a nation's future," remarked a UN development report, capturing the essence of the crisis many developing countries face today. Brain drain refers to the mass emigration of talented, educated and skilled individuals from their native countries to more developed nations, driven by economic, political and social factors. For a developing country like Pakistan, where human capital is a vital engine for progress, this exodus represents a grave threat to sustainable development. "In 2024 alone, over 700,000 Pakistanis approximately left their homeland seeking better opportunities abroad," reported the Bureau of Emigration and Overseas Employment, painting a clear picture of the brain drain crisis gripping the nation. As the brightest minds depart, the country is left grappling with weakened institutions, stagnant innovation and a widening socio-economic gap. Understanding the root causes and dire consequences of this phenomenon, is essential to crafting strategies that can transform brain drain into a potential brain gain.
