3. Conclusion :

3.1. Thesis restated

3.2. Concluding thoughts.

"The Essay"

Imagine a tree stripped of its healthiest branches, unable to bear fruit. Such is the state of a nation suffering from brain drain—deprived of the talent essential for its growth. Brain drain, the migration of highly skilled professionals to other countries in search of better opportunities, has become one of the most challenging problems for developing countries to cope with.

Pakistan is also facing the same problem.

Every year, thousands of doctors, engineers, IT professional and other experts move abroad in quest for better future.

Brain drain is not ~~only~~ just the migration of human capital but the systematic failure of a country. Brain drain is a result of multifaceted causes such as economic, social, political, educational and infrastural factors. It poses a serious threat to the economic, social, political and infrastructural development of a country.

Developing countries like Pakistan can excel and become self-sufficient only if they address the root-causes and far-reaching implications of the brain drain.
