

General instructions to be followed to pass essay

Technology Threat to Privacy

1- Spend time on rightly comprehension of the topic, you won't pass the essay unless and until you addressed the asked part

Outline 1. Introduction

2- Try to make your main heading in the outline from the words in the question statement

3- Try to add hook in the introduction. The length of introduction must be of 2 sides

4- your topic sentence in your argument must be aligned with the ending sentence

5- Avoid firstly, secondly, thirdly etc. in outline

6- add references in your arguments with proper source. Go for diversification of references

7- Do not add new idea or point in Conclusion

8- You won't pass the essay if make more than 4-5 grammatical mistakes

9- outlines that are not self explanatory or does not aligned to with the essay statement are liable to mark 0 and the essay would become null and void

10- always try to be relevant to the topic, if even your 1 or 2 arguments are irrelevant, the examiner would not pass your essay.

1. Hook
1.a. Background
Relationship between rapid technological innovations and traditional concept of privacy
1.b. Thesis statement
The essay will argue that despite many benefits, technology has created a critical and growing threat to individual privacy through the facilitation of mass data collection, pervasive spying and inherent security risks.

2. Privacy Dead in the Digital Era

2.a. Commercial Exploitation
Companies (Google, Meta) get profits from mass data collection by selling user's data to advertisers.

- Confusing, complex policies

2. b. Government and workplace spying

- Government uses technology to spy
- Employers monitor employees excessively by tracking

2. c. Emerging Technologies

- Smart Home devices (Alexa, smart cameras) collect sensitive audio, videos from private homes
- Algorithms create unfair bias to make automate decisions.

2. d. Security and Control

- Storing all data in one place making easy access to hackers
- Online information stored permanent and can be leaked

3. Way forward

- Implement stronger legal

Regulatory Frameworks

- Increase Digital Literacy and public Awareness
- Foster Ethical Accountability in the Technology usage.

4. Conclusion

- Summary of Key threats
- Final thoughts

You haven't understood the topic at all. The asked part was how technology is a threat to privacy. And the points which you are providing are not linked to the asked part.

Must work on your topic comprehension

Improve your phrasing

Word selection must be improved

Improve your phrasing

Must attend the tutorial session for further suggestions and mistakes

The Essay

Every morning, millions start their day by asking a voice assistant for the weather forecast, checking emails on smartphone, raising or lowering home temperatures by using a smart thermostat by searching and ordering food, grocery and using GPS location to go there and checking the traffic route. These daily interactions illustrate a pervasive dependence on modern technologies which have transformed the ways we live our daily life. This push for rapid technological innovation occurs in the tension of privacy breach. The tools that offers convenience are also controlling massive amount of intimate data often without our full comprehension. This essay argues

Irrelevant material should not be provided in the introduction

that despite its evident benefits, technology presents a critical and growing threat to individual privacy through mass data collection, pervasive spying by corporates and government sectors, and security risks that put personal data at risk every moment. The digital era creates a reality from which one cannot escape: Innovations that make life better systematically undermine our ability to be truly private.

In today's world, the concept of privacy is being challenged more than ever before. With the rapid advancement of digital technologies, the way we shop, work, communicate and socialize has drastically changed. The question arises: **Is Privacy Dead in the Digital**

age? While some argue that

others.

These companies make long, complex privacy policies, many users are not aware of these policies, rules and regulation and they are also unaware of the safety hazards related to agreeing on the policy. Many illiterate users unable to understand and unknowingly give access to their location, contacts list / photos and videos to these companies.

The another threat by technology to privacy is spying and monitoring users without their consent and realization. Many governments, agencies use technology for easy mass data monitoring and spying. Many Intelligence agencies use technology to trace criminals. They use phone recording and location tracking techniques. They use facial recognition and

cctv to make it hard for public to stay anonymous. Technology makes the access to mobile phone data and emails very easy and common, even deleted data can be recovered.

Employers monitor employees excessively. Tracking keystrokes and location removes trust and autonomy in the workplace. Even cameras are installed in offices to monitor make the workers fear of being watched stopped them from being speaking and roaming freely.

Where emerging technologies making lives convenient, they are also increasing privacy breaches. Many smart home devices are collecting sensitive an audio and videos from homes and

can be hacked by hackers.

IoT devices like Alexa, smart cameras records users daily life routine, moments. Many people share their personal issues, secrets to AI to get help and these things stored in their devices and AI can use this data and can share this data to third party.

Algorithms can create unfair biases. When AI systems are trained on data they are already biased, they can learn and replicate those biases. They can affect things like job hiring, housing and even policing.

The another big privacy risk is storing all data in one place makes it easy for hackers. Large companies store millions of people's ~~of~~ information in

in huge data bases. These data bases are big target for criminals. In 2021, Data from 700 million users, including names, emails, phone numbers of LinkedIn were posted for sale.

Information posted online can be stored permanently.

The internet never forgets mistakes, controversies, preventing people from moving on or being forgotten. Opponents use years old data to defame others. Many Political leaders and celebrities face this humiliation.

However, there are some ways that can use to protect data and privacy. Governments should implement universal data protection regulations similar to European Union's General

Data Protection Regulation (GDPR), which gives individual control their data and heavily fines companies that misuse them.

Education systems and public awareness campaigns should teach people about on-line safety, how their data is collected, and how to use privacy tools like encryption and VPNs effectively.

Encourage tech leaders and organizations to prioritize ethical consideration over profit maximization. The industry culture should respect human dignity and privacy.

In the end, technology fundamentally challenges our right to privacy through pervasive data collection. The threats of constant commercial exploitation of personal data for profit, expanding capabilities for government spying and the

creation of permanent digital records that prevent individuals forgetting their past. Preserving privacy in the digital age is not an impossible task, but a shared responsibility. The path forward requires a implementation of legal framework to protect privacy, balance use of social media and technology and ethical guidelines for both users and company. Privacy is a vital human right that must be protected.
