# Global Warming's an Expensive

## Haox

Thesis statement: (Forgot to write - written at <sup>the</sup> end of outline).

### Outline:

#### I. Introduction

#### II. Global Warming is not an expensive haox.

##### A. Disrupts global leadership

I. Case in study: US withdrawal from Paris Agreement

##### B. Disturbs international relations among states.

II. Case in study: Economy war between US and developing countries

##### C. Imposes carbon tariffs on developed states

III. Case in study: COP-28 agenda of carbon tariffs & trade

##### D. Disrupts Economic infrastructure around the globe

IV. Case in study: \$30B loss to Pakistan's economy in 2022 floods.

##### E. Results in climate change

V. Case in study: Wildfire eruptions at San Francisco (January, 2025)

##### F. Claims thousands of lives every year.

VI. Case in study: Death toll reaching 500, in hottest summer 2023, in Pakistan

##### G. Ensures Mass Migration

VII. Case in study: Destruction of houses in severe floods of 2022, Pakistan.

##### H. Affects atmosphere's natural setting

VIII. Case in study: Ozone depletion

##### I. Disturbs ecosystem

XI. Case in study: Biodiversity loss

##### J. Imposes Health implications.

X. Case in study: Skin Cancer as one of leading category of cancer in Europe.

III. It may be argued that Global Warming is an Expensive hoax:

A. Economic costs

B. Question about the Effectiveness of measures of Global Warming.

C. Political Motives

D. Setbacks in policies framework relating to Global Warming.

IV. Global Warming is a real global concern and is not an expensive hoax:

A. Shifts in climate patterns around the globe

B. Disturbs the GDP growth of developed as well as developing countries.

C. Disrupts the global peace.

D. ~~Exag~~ Enhances the severity of health problems.

V. Conclusion.

### Thesis Statement:

Global warming has become a global concern and it is not an expensive hoax. <sup>on the contrary,</sup> Some critics argue that global warming is an expensive hoax.

DATE: \_\_\_/\_\_\_/20\_\_\_

However, it is a real global problem and is not an expensive hoax.

Once, there was a stag with its captivating horns. It used to frown other companions because of its beautiful horns. One day, at the brink of river, it was encircled by the hounds of dogs. When it tried to escape in the lofty jungle, the horns of it was struck in the horny branches of trees. Hence, the reason of its pride became the reason of its death. The same goes with the Global Warming. The revolution made in the name of human activities and industries has resulted into the havoc that has become a global concern. Global Warming, increase in heat of Earth's atmosphere, ~~is~~ has become a reality that needs to be figured out by collective response <sup>of states</sup> at various forums. It has not only disrupts global governance structure but also disturbs international relations among the states. It has imposed carbon tariffs on developed countries, disrupts economic infrastructure of all the states, results in climate change that has claimed thousands of lives every year around the globe. It has resulted in mass migration along with disturbance in natural setting of ecosystem and atmosphere of Earth.

Moreover, it has severe health implications. On the contrary, some critics argue that global warming is an expensive hoax. It has not only imposed economic costs but also questioned the effectiveness of their measures. It is also argued that political motives and setbacks in policies implementation regarding global warming has turned global warming into an advantage game for the states. However, global warming is a real global concern that needs to be addressed and it cannot be left unaddressed as an expensive hoax. Change in climate patterns, decline in GDP growth and disruption in global peace are contributing factors that forestalls global warming is not an expensive hoax. The increase in severity of health problems is also among one of the contributing factors.

To start with, global warming ~~is not an~~ needs not to be unaddressed as an expensive hoax as it disrupts the global leadership. The United States (US) has been the leader since the cold war and it has hegemony on global leadership. The increase in number of carbon emission index from the United States (US) industries and his backing out policies from platforms of environmental safety is questioning his leadership in global world order. For example, **The US withdrawal from the Paris Agreement has resulted into the non-implementation of agendas of Paris Agreement along with lack of trust among other member countries.** Therefore, global warming and its related measures are reshaping the global leadership.

In addition to, global warming disturbs the international relations among the states. The power struggle in global order to justify the hegemony of one state by becoming the sole industrial power. The increase in carbon emission were reported by highly developed countries to become the economic giant in the world. Ultimately, it has increased the severity of global warming. **Forexample, Economy and trade war between the US and developing countries has resulted into the increament of  $CO_2$  level in atmosphere at more rapid rate than last decade.** Therefore, global warming is not an expensive hoax that should be left unaddressed.

Moreover, global warming imposes the carbon tarrifs on the developed countries as per their carbon emissions. The environmental protection agencies and multilateral forums have introduced the concept of carbon tariffs to put a check on the carbon emission of any country. **For example, COP-28 set an agenda to work on the carbon tarrifs according to the number of emissions of  $CO_2$  (carbon-dioxide) or  $CO_2$  level of any state.** Therefore, global warming is not an expensive hoax. ~~It is working~~ ~~to~~ Some work is going to <sup>counter</sup> ~~combat~~ the severity of problem. to some extent.
