

Hypocrisy is the main tool of Politicians

Politicians try to set an example of moral act by trapping the questioner with their language verbosity and sharp exaggeration of their governance. They change their set of promises before and after the elections just like autumn leaves scattered and swept with wind. Before they talked of moon but after elections of moon shadows only. Animal skills interpret in their actions, shed crocodile tears to gain public support. For self preservation, use the art of chameleons. They can change their ideology at any time like snake shed their skin. Their governance looks like to show but performance rather than work for public.

staring - the book cover or by
placing notes under - the pillow,
- they will become - toppers. These are
- the people, who after - his days
preparation needs recommendations
even in prayers. Fact is, no one
has - the 'magic stick' for success
'Shortcut' if needs extraordinary result
- then extraordinary work is require
So next time, when hold cup
of - tea in hand and - thinking 'to
study or not' Remember, Success
comes - from hardwork not - from
- fun.

Q No 3

Read the following passage carefully and answer the questions that follow -

i) The environment impact of renewable energy production is same like that of the traditional fossil fuels. The solar panels and the wind turbines are the renewable energy sources but their production involve the use of green house gases. For example, solar panel needs rare earth elements like cadmium and tellurium whose extraction needs mining practices which results in environment pollution.

The use of the traditional fossil fuels like coal, gas and petroleum directly causes the environment pollution by generating green house gases. So both renewable energy production and traditional fossil fuels have impact on the environment.

ii)
The electric vehicles are also not environment friendly as their production results in the pollution. Materials used for the production of electric vehicles require mining process.

Lithium, Cobalt and nickel used in the production of ER. Mining of these elements results in loss of habitat, soil contamination and water shortages in that particular area. Hence, the ER are not environment friendly.

iii)

Improper recycling is a challenge associated with the disposal of renewable energy systems after their lifespan ends. Improper recycling results in the toxic waste accumulation which will cause long-term pollution. So, toxic waste is a challenge which should have to be resolved for the use of renewable energy systems.

iv)

The article suggests that renewable energy is not entirely pollution-free during its operational phase as it is not immune to pollution in its operational phase. The wind and solar power need backup from fossil fuel plants. They rely on batteries and batteries need lithium and cobalt so results in environmental pollution. The

Solar and wind installation need land and the cutting of the forest for the land is a common practice. Even in the operational phase, renewable energy is not entirely pollution free.

↓
The limitations of renewable energy can be tackled by addressing carefully the seriousness of the issue of environment pollution.

The importance of improving energy efficiency, reducing consumption and diversifying the energy mix can result in overcoming the limitations of renewable energy system.
