4 CONCLUSION

In today's world, ~~one~~ one can only survive if one has power to dominate others. World today can only be run by Powerful. Who is powerful? What does it mean to ~~be~~ be powerful? How can someone become powerful? The answer to all these questions lies ~~in~~ simply in the way of thinking and approaching targets in the meantime. One who understands the need of hour and explore ways to address it, is the one who is powerful. Exploring Space to make that targets achievable and get recognize globally makes one powerful. In contemporary

world, discovering new things and exploring ideas to get control over world with prestige and power, is the one and only way to rule. Space Exploration has been used as a tool to get recognize globally and there are hundreds of domains through which one could explore and become leader.

Nelson Mandela, the once President of South Africa, sentenced to jail for 27 years but he never lose hope in himself and through his groundbreaking services, he end apartheid, racial war in South Africa, and

transitioned institutionalize racism to multiracial democracy. Nelson Mandela's efforts, apart from being jailed for twenty-seven years, make him renowned worldwide. He led the example by exploring ways of light in the darkness and became a role model globally and also the source of Global prestige through his intellectual, physical and mental power. Another instance of Europe, where people stood up for their rights and freedom with a new ideology of Nationalism paved way to French Revolution in 1789. People of late 18th century explored way to get free from the brutal rule of Feudal Lords and Bourgeois, which forced them to look into new ideas and get free from barbarism. Another effort which

was done by the ladies working in Rice fields, where their innovative idea of Protest French Song "Bella Ciao" was sung by the ladies of rice field, recording their protest against violence. It was the very first time that protest was recorded by singing song, which meant "blessings to one who left us and are martyr, our brothers". This new way is used as a tool now-a-days to get global attention and yet it is powerful.

Nonetheless, there are other ways to get global prestige. By becoming economically stable and sustaining this possible for decades, one gets power to rule planet earth. USA has the top GDP in the world of 67 trillion dollars.

Contributing more than 50 percent in global GDP. Such an immense power of economy can really be anything and USA now is the only state which control countries through its economy. It influences other country by giving loans and credits through IMF and World Bank. USA understood in early 20th century that to rule the world, it has to make some policies to attain not only global respect but also economical power and thus it is at the point in contemporary world. But, world does not remain same as always and it has been proved by history, starting from Hunters and gatherer's society to today's industrial and intelligence society. It has evolved and now China is rising to compete with USA. China is

Emerging as world's second high GDP of about 27 trillion dollars, contributing 27% percent of global GDP. Proclaiming that inventing ways to become globally known is a powerful tool and also necessity of survival.
