Question No. 2

Title - Optics over Performance -
A Politician's Masterclass

Politicians are well-known for their way with words. They use them masterfully and waffle themselves out of everything. For this feat, the author pays them ^a tribute and acknowledges their role in keeping the public entertained. They have also developed an innate, near-Olympian ability to wade effortlessly through the political formail and adapt to the new normal. While, it is always thought that the pen is mightier than the sword, for a politician (it) a well-timed photopportunity is mightier than both. This should serve as a ^{grave} reminder that today's leaderships limited to optics and is not concerned with deliverance.

QUESTION

No. 3

1) What can be inferred ... fossil fuels?

The production of renewable-energy systems is a resource intensive process that takes its toll on the environment. The production of solar panels requires rare-earth metals whose extraction results in environmentally damaging mining practices. While for wind turbines, steel, concrete and rare earth metals result in generation of significant greenhouse gases.

2) How fair ... friendly?

Electric vehicles (EVs) are not completely environmentally friendly. As their production process involves, especially for batteries, habitat destruction, soil contamination and much more. Moreover, if the EVs

DATE: ___/___/___

are charged using fossil fuel generated electricity. Its utility diminishes significantly. Lastly, their disposal also present environmental challenges making them not completely ready as a solution to combat pollution.

3) what challenge ... ends?

Renewable energy systems have finite operational cycles. Currently, their components are not recycled efficiently due to which considerable toxic waste is being accumulated. This challenge has not been effectively addressed by manufacturers and government, which in turn diminishes the green returns promised.

4) why does the article ... phase?

Supply chains, land utilization are notorious for environmental degradation during the life cycle of renewable energy projects. Batteries, and solar farms, and wind parks require large swaths of land to be cleared, resulting in degradation of the environment and during the process many human rights abuses are also committed.

DATE: / /

5) How does 100% energy?

The article proposes a realistic and pragmatic approach when considering renewable energy projects in the future. It sets forward the path and advises that careful management and realistic expectations should be kept in mind. Lastly, it also brushes upon improving the energy mix, efficiency, and reducing overall consumption.

QUESTION NO.

4

1) I will be completing this project by this time tomorrow.

QUESTION

No. 7

Some students who prepare for competitive exams often believe that they can ace the exams by either staring at the books all day or by keeping it under their pillow while they sleep. These are the same sort of students who pray for a miracle after studying for two days. In reality, (this) success has no shortcuts nor any magic wands that a person can wave. If someone desires extraordinary results then they must be willing to put in the same amount of effort.

DATE: ___/___/___

So, the next time when you are (sleeping) deep in thought, while sipping tea, about whether or not to study. Remember! Success is achieved only through hardwork and not from fool's play.
