## Question no 4

### Global Warming is an Expensive Hoax

#### Outline

#### 1- Introduction

##### Thesis Statement

Global warming is not an expensive hoax, it is the real phenomenon which has been threatening whole mankind. It has affected the growth and development of whole world.

However, it can be traced by taking pragmatic measures.

#### 2- Overview of global warming

#### 3- Factors that cause global warming:

- 3.1- Increasing green house gases
- 3.2- Urbanization and deforestation
- 3.3- Excessive use of fossil fuels
- 3.4- Industrialization and private transportation

Date: \_\_\_\_\_

Day: \_\_\_\_\_

## 4- Impacts of global warming:

4.1- Frequent natural disasters

4.2- Economic turmoil

4.3- Increases social destructions

4.4- Responsible for political conflicts

## 5- Measures to reduce global warming:

5.1- Shift on renewable energy

5.2- Sustainable development

5.3- Awareness of global warming

5.4- Reforestation and promoting  
public transport

## 6- Conclusion

is main factor. Using crude oil for production of energy, and developing unsustainable societies. There are other factors also that fuels in fire, such as, using too much private transport and running industries in uncertain way. These all factors bring their result and started destroying the world with natural disasters and inviting social destructions including: education, infrastructure, health and food. Economy has badly affected by the environmental unprecedented events. World politics is also been affected by this pathetic phenomenon. However, every cloud has silver linings, there all problems related to the global warming can be traced. This earth has sufficient power to rejuvenate itself with a little help of human being. There all problems will be overcome one day and our environment will be fresh.

Global warming is the phenomenon which can be described as, when average change in the environmental temperature occurs it cause global warming. It has been in the discussion since 1987. After the successful mission to mitigate the ozone depletion, World's leaders decided that we must work on the global warming because, they had seen ice melting in the Antarctica continent. Global warming has been destroying the whole prosperity of the earth with its negative effects. UNFCCC which is the United Nations Framework on the Conference of Climate Change has started working on it to control the negative effect of it, and make sure that our upcoming generations will not face such kind of hurdles in their lives. It is true phenomenon and it has been affecting the world.

In a nutshell, global warming has been threatening to the world, it is reality not an expensive hoax. It has hampered social activities and economical activities which has leaded developing nations towards the poverty and distraction. It has come by few activities that has been continuously practiced by humans: emission of nitrogenous gases, cutting trees, unsustainably developing societies and overly using fossile fuels, there all are the main causes of global warming. It is most stressful time for the whole human being, because, seeing such incidents that has never been seen in the history of mankind. However, there are numerous measures to tackle this issue, that can be deforestation, sustainable development and producing renewable energy, by applying these measures one day we will trace this phenomenon.

Sir, due to some family issue I cannot write the full length essay, kindly mark it according - these three

Paragraph: Intro, cause, conclusion and give marks out of 100.

Thank you sir
