Question #02

Make a Precise of following Passage and suggest suitable title.

Leadership : Serving the Public
Politicians are the focal point of the integrity of the state. During governing the body of state, they conduct sessions and sermons in front of public. They face opposition from the public and opposite party. But they make promises to fulfill the wishes of public just before the election. But unfortunately, the value of their promises are diminished because they do not fulfill their wishes. The politicians considered, the education is significant but if it is in the hand of politicians they do not discover the hidden talent of

of the Public. In this regard, opposition play critical role to remind their duties. Because leadership means to serve the public not to pretend the serving the public.

Total = 272

= 110

Question # 04

Read the following Passage and answer the questions that follow.

1. What can be inferred about the environmental impacts of renewable energy Production compared to traditional fossil fuel.

Renewable energy resource play significant role to mitigate the effects of environmental pollution than traditional fossil fuel. But the production of renewable energy resources cause environmental degradation, while producing

solar and wind energy. To produce energy, elements are used which is directly taken from the source of non-renewable energy resources. So, along with traditional fossil fuel, renewable energy resources becomes the source of environmental pollution.

2- How far the electric vehicles are environmental friendly?

Electric vehicles also become the source of environmental pollution because the manufacturing of electric vehicles cause the loss of habitat, soil contamination. If it is charged with batteries which is source of fossil fuel, become the reason of environment stress. The recycling process of EVs is also not efficient. This is the reason, electric vehicles are far from the environmental friendly.

3- What challenge is associated with the disposal of renewable energy systems after their lifespan ends?

The renewable energy system have finite lifespan ranging from 20-30 years. When this lifespan becomes end, the

recycling and collection of toxic waste is critical. It is not easy to accumulate the waste for a longer period of time.

That's why, there is always need to be a best infrastructure to manage this problem.

4- Why does the article suggest that renewable energy is not entirely pollution-free during its operational phase?

The renewable energy system is not completely pollution-free because its operational phase cause pollution. To produce renewable energy resources, fossil fuel and batteries are used to store the energy. It have bad affects on the environment & cause pollution.

5- How does the article propose addressing the limitations of renewable energy?

Renewable energy resources have limitations to produce resilient energy. Because for the production of renewable energy resources needs a vast land area to setup,

displacement of forests, habitat of living organisms. This is the critical problem but its beneficant resources could not be ingrored. So, by taking responsible decision and adopting practical approach, it will be easy to harness its potential.

Question #7

Translate the following into English.

The students who are preparing the competitive examination, they are considered that they will become topper by taking notes beneath the cushion or by staring the cover of the book.

After preparation of two days, they find the source in their prayers! Infact, there is short cut of success. If you find exceptional results then you would pay the exceptional price. So, on the next time, when you are thinking about reading, while taking a cup of tea then remember one thing, success is not a job. It will get to hard work.
