(iii) Monitor:

Every student in a class must be given a chance to become a monitor so they learn to manage a small group of people.

Mentor:

Parents are the first mentors in a child's life who teach them emotional values, discipline etc.

(vii) Beneficent:

Teachers substitute parents in a child's life hence they must be as beneficent as parents to the children around them.

Beneficial:

Workouts are only beneficial if the pre and post meals have adequate nutrients.

Question # of (Translation)

There are some students — preparing for competitive exams — who believe that by sticking at a book's cover or tucking their notes under the pillow will get them to become a topper. These are the exact same students who after a couple of days of hardwork offer bribes even in their prayers. In reality, no one has a shortcut or a magic word to success. Unique results require unusual hardwork. So the next time you sit with your cup of tea and wonder whether to study or not, remember that success only follows hardwork and no jokes!

Question #02

(Precis)

Political Leaders are
Talented Performers

One has to wonder at the politicians' unique talent of using words for their own benefit. Whether asked a simple query or questioned their motives, they reply with such a bombastic language just to hide and evade their ignorance and demeaning their so-called intellect. They are also expert at making premises. They can make hundreds of them only till the votes are collected. Moreover, they do not even fail to entertain their viewers. Once the camera's lens is on them, they show exemplary performance of being innocent and virtuous. They hardly stick to an ideology, that is directly proportional to the political climate around them. This political class is, hence, a reminder that leadership is about perfecting one's performance. Precis = 108

Passage = 323

Question # 03

(Reading Comprehension)

1. Answer:

Renewable energy production is not immune to pollution if compared to the conventional fossil fuels. Renewable energy leaves its own environmental footprint and is absolutely ^{not} unblemished. Firstly, production of, let's say, solar panels, wind turbines etc., all require materials from earth i.e., extraction cause installing solar parks, wind turbines require large areas that can only result from deforestation. Lastly, recycling these equipments also require a mechanism otherwise it will lead to toxic waste.

2. Answer:

Electric vehicles (EV) have an image of being environmentally friendly. However, it has their own disadvantages for the climate. Firstly, their production is contributing to pollution, habitat destruction, soil contamination, and high water usage. Also, the electricity to charge the car if comes from fossil fuels then the whole idea of...

being environmental friendly dies. Lastly, recycling EVs can also cause toxic waste.

3. Answer:

Every renewable energy system has a life span of twenty to thirty years. Once they reach their full utility, recycling them is not simple and is also not practiced yet. Recycling these material require robust mechanism

4. Answer:

Renewable energy systems are not entirely pollution free during the operational phase. They have an intermittent nature i.e., they require some backup from the fossil fuel energy or battery storage. Both of which have notorious impacts on the environment.

5. Answer

The article suggests that the renewable energy is not the solution for the pollution problem. It is complex in its nature and requires careful management. Article suggests to acknowledge the limitations of the renewable energy.
