

ANYONE WHO HAS NEVER
MADE A MISTAKE HAS
NEVER TRIED ANYTHING NEW

OUTLINE:

1 Introduction

2 Overview Of Topic

3 Anyone who has never made a mistake, has never tried anything new.

i) New Way of Protest but lack understandings

a) Rice fields ladies and "Bella Ciao"

b) Khilafat Movement of Indian Muslims.

ii) Emergence of Policies and little awareness

- a) Napoleon's try of Continental System
 - b) Atama Jugal speech but lack inclusivity initially
- iii) Trial of new ideas but failed later.
- a) Dictator's deviation of power
 - b) Constitutional abrogations and amendments
- iv) Multiple waves of feminism:
Every next movement cauterized old mistakes
- a) Liberal feminist Movement
 - b) Radical and Social feminist movement
 - c) Surat March
- v) Ideologies and Errors
- a) All "isms" were new ideologies
 - b) "End of History" by Francis Fukuyama
- vi) Renaissance: a recovery from Dark ages

- a) Meetings of great minds in cafe to re-establish library
- b) Early findings ^{Convert to} ~~the~~ all known languages to remain secure/safe

vii) Inventions with thousands of trials and failures

a) James Dyson 5127 prototypes failed before inventing Bag-less Vacuum Cleaner.

b) Colonel Sanders CEO of KFC failed 100 times to prepare Chicken

viii) Opposition of Big Bang theory with unique ideas, yet all failed.

a) Hoyle's idea of same state of universe

b) Idea of another scientist of expansion of Planets

ix) Space Exploration and blunders

a) China's epic rocket fail in mountains

b) India's multiple fail but never lose hope

x) Blunders in Health and Medicine

a) Plague and Beak masks

b) Covid-19 vaccine

xi) Evolution of Industrial Revolutions

a) Honda bombarded twice in WWII and Toyota's Rejection

b) Solar Panels and problems

xii) Sportsmanship in sports

a) Arshad Nadeem new ways and earlier failures

b) Indian Chess Champion's techniques

xiii) New Stars emergence from old ones

a) Priyanka Chopra Stepped-in Hollywood.

b) Robert Swickson "Mr Bean"³³

4 CONCLUSION.

made

Ancient people used to do work on their own without any assistance. Then on one day, a person, tired of doing heavy tasks on daily basis, sat aside thinking a way out to decrease the load of everyone, working out hours daily. He thought of ~~making~~ ^{making} a carry for transportation of heavy materials from one place to another. He made a wheel of square shape assuming it would work. But he failed and tried again using another wood, carved square and pushed and pulled. Pondering over and over again, he realized his mistake and carved the wooden

piece in circle. To his surprise,
that worked. From this event
he analysed that one will
surely make a mistake on
trying new things which will
make a difference from those
who never tried anything new
and worked on traditional
conventions only. This story narrates
that anyone who has never
made a mistake actually had
never tried any new thing. Only
those who puts an effort, makes
commits mistake and learns. Similarly,
the world is full of examples
who tried to bring something
new out of no where, and this
essay will discuss some of those
events who tried and gave lesson
to others, from their sufferings
or achievements, displaying the
importance of trials and error.

Error is an innate quality of human. Anyone who has err means he has tried something new instead of going with the old already driven methods. Error is not a bad thing but a new horizon to look into and to understand what is not worthy for a certain thing. The quote "anyone who has never made a mistake has never tried anything new" emphasizes that progress is achieved only when one makes a mistake. He learns and tries new ways to accomplish that new thing. The dedication and perseverance of one makes the way of ~~inor~~ innovations, a light of hope in darkness and a path to move on easily. Efforts and hardwork definitely pays off

but for that ~~one~~ one has to work and think out of the box. For instance taking an aspirant into consideration. Most of the aspirants could not clear the central services exams in first attempt because they follow the foot steps of others and lose themselves and different identity. By the time they realize their mistake, they come up with a new way out and succeeds. Every candidate inspires other with their own different stories and hard work which shows that evolution is key step to succeed and one has to err before making a new beginning or one has to try and think differently from others. and

In the early history, the European ladies and practices

proletariate were suppressed by
Bourgeois, an upper class. They
used to do whatever their
~~far~~ forefathers were used to do.
This shows that they were not
trying anything new to get
deprive off the oppression. And
one can come out of darkness
when he desires to take a
step and move forward. "Bella
Ciao", a protesting poem, sung
by the women of rice fields
made a unique way out of
protest against Monarchs. Although,
they were brutally crushed due
to their protests, but they showed
a new way to the world.
~~that~~ They made a mistake while
protesting in a new way that
they only used word power
against cruel Monarchs. Later,
from learning the mistake, they
revived with a new zeal and

started protests with demand of freedom. This shows that the ~~re~~ err they made while pursuing something, made them to a mistake which they realized and recovered. A similar effort was done by Indian Muslims in 1919. They protested by creating a movement named "Khilafat movement" after World War II, in solidarity with Turkey. But this ^{new} movement and new way agenda ~~prove~~ displayed many errors and were retriered later in other movements, showing that new steps often crumbles but finally it turns to smooth walk.

One should never give up from trying to achieve his aims - irrespective of positive or negative, the debate is on

efforts. A famous proverb
"try, try till you succeed" also
shows the strength to remain
firm and dedicated towards
goals, no matter what the
circumstances are, one should
keep developing new ways and
continue learning. Napoleon Bonaparte
tried a new way to end
British Hegemony by driving
"The Continental System", that
restricted the Britishers from
trade. Napoleon to achieve his
aim devised a new system
which was never thought of
before. Initially he succeeded
but there were mistakes from
which learnt. Allama Iqbal's
speech at Khutba Allahabad that
he wanted to see (4) four
provinces amalgamated, forgot
to add East Bangladesh. His
innovative speech to gather

muslims was a different way but had a loop hole as well displaying that no-one is perfect and it is usual to commit mistakes in trying something new.

Who do not tries to find a way to another route, keeps striving in a circular path, which has no end and no progress. No-one gets to know what is error until he tries to look around with a new lens. Doing new things most probably will fail initially but could would make an ultimate success. Pakistani dictators to legitimize their power in politics, find a way through devolution of power to make local governments and give them money to remain quite against them. This new idea of devolution

was a beginning step for Pakistan's prosperity yet it lacked proper policies. This error was solved later but showed that going a mile ahead surely shows the way more close to achieve. This act although was unethical politically, but shows that mistakes only deserve those who dare to go out of the crabs baskets and explore the world.

New opportunities are only for those who tries to gather them with their innovative ideas. One who is afraid of doing anything new would die in in this cruel world. One such example is of feminist wave. Liberal feminist dared to step in patriarchal society for freedom. This was a surprise along with shock for part patriarchal

society that how the oppressors can stand up against them. The matter that whether the feminist movement succeeded or not, is not an debate. The point is trying a new solution to the existing problem. As said earlier, new ways often comes with errors and to err is human.

Similarly, liberal feminists despite their strong agenda, created a loop hole of racism itself and for which several other waves ~~is~~ ^{to settle.} arose. These new waves showed that ~~events~~ only new things can make a way of mistakes.

Ideologies are also new perspective of different thoughts like Socialism, capitalism, conservatism, populism, nationalism and so on. All these "isms"

were new in history until late 1990's. But all these "isms" should a way to world that together people can not only drive ways but also can achieve their goals. These "isms" marked great revolutions like French revolution, unification of Germany and Italy etc and showed that new things along with errors can achieve anything. These new beginning started early in renaissance when great minds united in old Saharan desert Club and learned from their mistake during Mangols dark age that they have re-research about universal findings and store them multi-lingual books so, they could not be burned again. This new thought emerge due to errs of previous findings.

Innovations and discoveries are two different things. Discovery is something to bring into light which was already existed. Like Columbus discovery of America but innovations is to bring something into existence like Edison's bulb, phonogram and Telephone etc. All these things never existed but invented and had to go through a process of trials and errors. James Dyson, an innovator, made 5127 prototypes before inventing World's first Bagless Vacuum Cleaner. He made 5000 plus trials shows that he was trying something out of usual. But his consistency and learning behaviour showed that errors are just meant to mend to achievements. The famous "KFC"

fast food restaurant, was also an invention of Colonel Sanders at the age of 65. He made unusual recipe of ~~2~~ chicken for the very first time at 100th attempt. His dedication ~~at~~ at age 65 ~~at~~ and goal made him to work untirely to resolve new mistakes and find a way out.

Trials never ends untill everyone stops inventing ways for the ease of this world. like during the Black death in Europe, doctors invented Beak-face mask implanted with moses and herbs to prevent themselves from the contagious disease. Although that mask proved the uselessness but paved way to understand the issue in

invention. Similarly Covid 19 vaccine was made after trials from several countries. All met a series of challenges while creating a new thing out of none. These series proved that anyone who has made a mistake has tried something new.

Exploration is equivalent to mistakes, the more someone explores, the more he errs. There are several examples of persons who made their lives from the scratch, learning from their own invented mistakes and challenges. Like Ameer of Honda was rejected for his ring piston design by Toyota, later, he reapproached the design and led a legacy. Solar panels were the invention

to get rid of electricity, but as the name suggests, it could only be run in day light.

Arshad Nadeem, Pakistan's Champion of Gold medal in Olympics, failed initially while trying his luck in Javelin throw, similarly, Indian Chess champion won against world's all time chinese winner, Priyanka Chopra, a Bollywood star, stepped in Hollywood to try her luck.

Initially made mistake like getting glutathione injections to get fairer skin but later learned to own her skin. Robert, the world wide known character

"Mr. Bean" tried an unusual way to drive the world with laughter they never seen before.

Hence, anyone who ^{has} never made a mistake is surely has never committed of doing new,

usual and different ways things.

Closing the Pandora box of arguments, one thing that prevailed is that one has to get through this world only by achieving unusual ways than traditional convention. Else the world would have died end. As no-one has come up with ideas and innovations. One who never made a mistake does not know ^{about} the essence of mistakes. Mistakes are the blessings for those who strive for something new. Mistakes makes the concrete road for of new openings to the universe. Mistakes help people grow, learn, remain resilient, strive hard and dedicated towards success. And those who do not tries and commit mistake

are resistant towards growth and learning. They don't strive for anything yet ~~class~~ not get success and live a life like a social animal who wakes up, eat, work and sleep and cycle continues until his final breath. But those who try and find unique ways are remembered ever in books and theories even after their death. So, anyone who has never made a mistake has never tried anything new.
