

Final Mock - Precis and Composition

34/80

Q2 - Precis

Politicians: Masters of the Political Stage

Title: How politicians deceive people

Overall idea is ok

Title needs improvement.

Grammar is ok.

Work on Spellings

Work on length of Precis

it should be 1/3rd

06/20

Politicians are skillful in their communication techniques. When inquired, instead of providing an actual answer, they evade truth with their words, and they add complications to it. Moreover, false promises are made before the elections by these politicians. They smartly deceive people with sentiments of false display of goodwill. In changing political environment, they adapt to maintain their personal interests. Hence, it diminishes the idea of leadership serving the people.

Q3 - Comprehension

10/20

Length of Answers is enough

Avoid Irrelevant Ideas and Detail

Avoid Repetition of Ideas

Similar to traditional fossil fuels, renewable energy production have deteriorating environmental impacts. Like fossil fuels, the components for renewable energy systems requires exploitation of scarce resource, mining, destruction of habitat, production of toxic waste and generation of greenhouse gases. However, it does reduce reliance of fossil fuels, mitigating the negative impacts on environment to some extent. Therefore, perceiving renewable energy system as the savior of environment is incorrect in absolute terms.

2. EVs are generally praised as a green environmental friendly alternative. This is because they don't consume fuel but electricity. Ironically, if the electricity was produced by fossil fuels, the emission will still be produced. Moreover, the mining of battery material like lithium, cobalt and nickel requires extensive mining which destroys habitat, contaminates soil and use large volumes of water.

1012
PAPERWORK

In addition, battery recycling may produce toxic waste. Although EVs may produce less emission, the overall impact is still detrimental to environment.

3. The disposal of renewable energy systems is yet another challenge that damages the environment.

There is a need of robust infrastructure and recycling to ensure effective disposal of renewable energy systems such as Solar panels, Lithium batteries and wind turbines when their life span ends.

However, the complexity involved and lack of widespread practice of recycling has made it difficult to dispose. If properly not disposed, it could produce toxic waste which damage the environment.

4. Renewable energy is not pollution-free in its operating stage. To begin with, renewable energy systems such as solar and wind power rely on fossil fuels and batteries for backup. Fossil fuel produce emission in the environment. Batteries, on the same page, requires components that are scarce and is acquired through mining. Moreover, its disposal could result in toxic waste. Therefore, renewable energy has been falsely perceived as pollutant-free in its operating stage.

5. The article has proposed different ways to mitigate the limitations of renewable energy. It advocates for a more balanced perspective. Rather than blindly pursuing for renewable energy sources, it must assess the overall effect. In addition, it suggests the diversification of energy sources and reduce consumption and improve energy efficiency. Thus way the limitations related to renewable energy systems can possibly be mitigated.

In comprehension answer each question comprehensively

Do not be irrelevant in your answer
