

Global Warming is an expensive hoax.

25/ -

Outline

① Introduction:

"Indeed, Global warming is a solid reality of 21st Century, which can also be presented as an expensive hoax. Its impacts can be minimized through pragmatic solutions"

steps

② How global warming is a reality of 21st century:

a) Global warming increase the intensity of natural disasters

Flood 2022, Pakistan - 33 million people homeless, and ~~Earthquake~~ Flood in Afghanistan ~~Turkey~~ 2024, 1048 people loss lives.

b) Agriculture sensitivity to global warming

NOMA Pak - Flood 6.4 million Acre crops - loss

(2)

Date: \_\_\_\_\_

c) Melting of glaciers leads to increase in sea level.

- Europe is second largest melting.

d) Bad air quality leads to severe health issues.

INILTO - report, life expectancy reduce 3.9 years.

e) Excessive drought conditions contribute to political conflict.

- water dispute India, Pakistan and Afghanistan.

f) Excessive heat stroke leads to loss of human lives.

- 46,000 died in Europe in 2023.

(3) Global warming also presented as expensive hoax:

i) Global warming presented as hoax due to economic benefit of certain entities.

ii) Propaganda of developed states.

67% - plus - emission contributed by developed state.

Date: \_\_\_\_\_

③

iii) Natural climate vulnerability

iv) Flawed scientific data <sup>and</sup> to political interest of developed states

④ Pragmatic measures to minimize the effects of global warming:

a) Mandatory environmental education to aware public about environmental threats

b) Ensure the implementation of environmental treaties at national and global level.

⑤ Conclusion:

Imagine a world, where the threats of global warming become rampant. Excessive heat stroke, vulnerability to natural disasters and threats of wild fire become a norm of a society. The global economy face unprecedented crisis. Yet, despite overwhelming scientific evidence, some claim that this is all an elaborate, costly fabrication, could the most pressing issue of our time really be an expensive hoax. It just the misinformation presented by some global entities. In true sense, global warming is the reality of the 21<sup>st</sup> century, due to which the intensity of natural disasters become increased, agriculture sector is facing unwanted consequences across the world. Melting of glaciers and bad air quality seen as a severe threat to human life. Besides, excessive drought conditions

Contributor to interstate and intrastate political conflict over natural resources. In the same way, the Earth temperature ~~become~~ has increased and excessive heat stroke affects human life adversely which leads to loss of life and economic consequences. On other side it is also presented as an expensive hoax due to economic benefits of some entities and propaganda of developed states. They considered it as a natural climate vulnerability and some believed as they presented flawed scientific data due to political interest of developed states. To sum up, indeed, global warming is a solid reality of 21<sup>st</sup> century which can also be presented as expensive hoax. Its impacts can be minimized through pragmatic solution. Therefore, climate change

Date: \_\_\_\_\_

and global warming are considered as a reality of today world.

Global warming is the solid reality of 21<sup>st</sup> century, due to which the intensity of natural disasters become rampant.

People across the world are facing its consequences in different form like floods, earthquake, wild fire, air pollution and severe drought condition. People of the world show vulnerability to the severe impacts of global warming.

According to NDMA, flood 2022 in Pakistan affect about 33-million people, in which 1700 loss their life and 12,000 become injured. Moreover, floods

in Afghanistan 2024 loss about

1024 people lives. As a result, the such flooding is due to the affects of global warming, that

GM

GM

disturb the natural process of climate. Therefore, global warming increased the intensity of natural disaster, which is considered as the reality.

Moreover, agriculture sensitivity to climate change becomes a huge threats to human life due to global warming. The increase in temperature and shortage of water affects agriculture sector adversely across the world, which leads to food shortage and reduction

in productivity level. As per report, due to flood 2022 in Pakistan loss about 6.5 million acre of crops and also due to heat stroke 30-40% reduction recorded in mangoes production.

These condition leads to wheat crisis in Pakistan 2022 and food shortage. Therefore, global warming is considered as the reality.

of contemporary time, which have unwanted consequence on human life.

SVA In addition, global warming contributes to melting of glaciers across the world, which leads to increase in sea level. Global

warming increased the average temperature of the Earth by trapping sunlight radiation through greenhouse gases. These increase in temperature

leads to melting of glaciers at large level. According to the report

of world glaciers and ice, the

European glaciers are the second

largest melting glaciers of the

world. It also says in Antarctica

larger than London city ice cap

merged into the ocean water. From

industrial revolution about 8-9 inch

increased had been recorded in the

sea level. This shows that, global

warming have significant role in

melting of glaciers which contribute to flooding. Therefore, global warming is considered as the reality of the 21st century.

In the same way, bad air quality due to global warming have severe impacts on human health. Due to global warming the concentration of pollutant

become over increase in the troposphere which have influence on human respiratory and immune systems. Bad air quality

caused Emphysema, shortage in breathing process and even leads to lung cancer. According to WHO report due to bad air

quality life expectancy in Pakistan reduced about 3.9 years and also says that in Lahore the life expectancy reduced upto

7 years. These negative environmental impacts are seen due to

←

?

WC

global warming. Hence, these severe condition of air-pollution shows that global warming is the reality of 21-st century.

Further more, excessive

drough condition due to climate change or global warming lead to political conflict. These

VA

political conflict arises due to shortage of water among states and provinces. Glaciers is

considered as the reserve source of water for domestic and agriculture use, but due to

global warming the process of glaciers melting become rapid. So in some area it ~~scarcen~~ <sup>leads to</sup>

hood while in another it cause shortage of water. ~~For~~ For

instance, the water dispute between Pakistan and india and also between Pakistan and Afghanistan is due to global

warming which cause shortage of water. Moreover, it also rise conflict among provinces like water issue between Sindh and Punjab and among KPK, Balochistan and Punjab. This shows that, global warming is the reality which have significant role in political disputes among states and provinces.

Temp

Similarly, excessive heat stroke leads to loss of human lives due to global warming. Global warming increased the average temperature of the Earth due to which people across the world facing lethal consequences. Such increasing temperature make human vulnerable and unable to compete the changing environment, which leads to less life. According to the WHO report in 2023 about 46,000 people died in Europe due to excessive heat stroke, in which most of

Really?

the

them are at child and old ages people. This shows that heart stroke leads to loss of life. Hence, global warming is the reality have a pivotal role in increase in temperature that contribute further to loss of <sup>human</sup> life.

Some people is also presented global warming as an expensive hoax due to economic benefit of certain entities. Despite the scientific evidence they presented that global warming as a natural process which need no any mitigated measure to counter. It is there economic benefit because it is due to while its industries have huge threats of losses. For instance, in 2015, withdrawal of USA from Paris climate agreement shows that global warming is an expensive hoax. As Donald Trump said it is a natural process and increased due to natural activities. This shows that United

Date: \_\_\_\_\_

(13)

States presented its own economic  
best interest and claim that it is  
a natural process

Moreover, global warming  
is presented as expensive hoax  
which presented by developed states  
as propaganda. Most of the  
developed state especially global  
North presented global warming  
as a hoax that it is a  
natural phenomena and all the  
global entities need to mitigate  
it. According to IPCC ~~IPCC~~ Northern  
developed states climate change  
is caused due to both developing  
and developed state emission. As  
per UNFCCC about 15% emission  
produced by USA, 35% China,  
7% India and 9% Europe. They  
want to stop these emissions and  
work for the promotion of clean  
and green environment. As a result,  
global North want to interfere in

industrial development of developing state to maintain their hegemony.

Therefore, global warming is presented as propaganda by developed states to show that it is an expensive hoax.

Furthermore, developed states portrayed flawed scientific data for their political interest to present global warming as expensive hoax. Their aim is to interfere in the industrial development of the developing states. They stabilize themselves to generate huge economy and ensure their development in every sector of life. For instance, Global North claims that both developed and developing states are equally responsible of the climate change or global warming. But as per UNFCCC report, more than 67% emissions from the past industrial era have been

Contributed by the developed states. This shows that, developed states presented flawed scientific data to consider developing states responsible of carbon dioxide emission. Hence, Global North portrayed flawed scientific data for the fulfillment of their national interest to consider global warming is an expensive hoax.

Global warming is an international issue, environmental education is mandatory to create awareness among public. These awareness make sure that it is the responsibility of all human of the globe to work for the clean and green environment. It needs to start programmes at national and international through NGOs and governmental organizations for the awareness about environmental threats among public. For this purpose, international

organizations like UNO, UNFCCC and COPs are working to minimize the threats of global warming and climate change. As a result, such actions leads to educate public about the devastating effect of global warming and climate change.

Besides, ensure the implementation of environmental treaties at national and international arena have the potential to promote clean and green environment. The international communities need to make mandating the implementation of environmental treaties to reduce the affects of global warming. For instance many environmental treaties like Kyoto protocol, Montreal protocol, UNFCCC, COP and Paris agreement ensure the promotion of clean and green environment. The implementation of these treaties not only ensure

environmental awareness but also help in promotion of plantation and afforestation. Therefore, the role of global <sup>treaties</sup> are essential in neutralization of the impact of global warming.

Red In a nutshell, global warming is the reality of 21st century, its process has been exacerbated since industrial revolution. Due to which increase in global temperature has been recorded. It is aggravated due to manmade activities, to produce huge amount of greenhouse gases. It is also presented negatively by some entities for their political and economic interest. It is considered as an expensive hoax to present as propaganda and flawed scientific data for the political interest of the developed states. Indeed, global warming is the reality of

Date: \_\_\_\_\_

the contemporary era, which can also be presented as expensive hoax. However, its impacts can be minimized through pragmatic ~~steps~~ **steps**. Therefore, ~~of~~ global warming is the reality, which has been proved through scientific process.
