General guideline.
Maintain the tone of the topic
Answer the asked part
Pay attention to the tense of
the topic and the given
keywords

Follow the outline exactly as it
is
Provide substantial
research-backed evidence.
Use formal language always
No use of 1st and 2nd person
pronouns.
Maintain unity of idea in a
single paragraph.

Global Warming is an expensive hoax

~~Thesis Statement: Global warming is often
portrayed as a fabricated crisis driven by
hidden agendas. This view is caused by economic,
political and corporate interests that fuel doubts
about scientific evidence. However, certain measures
are required for the development of transparent
and evidence-based strategies to confront global
climate challenges.~~

Doesn't address
the topic

The topic is not
asking why it is
criticised as such.
The topic is stating
that it is an
expensive hoax.
You either agree
with the statement
or disagree with the
statement.

Topic breakdown

Pick a stance. Don't agree with both sides or pick
a middle ground. Discuss how or why of whether
global warming is an expensive hoax or not.
Combine the environmental and economic aspect
don't discuss them separately. No solutions are
required in an argumentative essay.

Outline:

I. Introduction

II. Global warming is an expensive hoax

A. Promotes fear to justify massive funding

B. Lacks universally consistent scientific
evidence

C. Exaggerates natural climate patterns

D. Benefits political agendas of influential
governments

E. Supports profit-driven environmental
organizations

Date: _____

Day: _____

~~F. Drains resources through ineffective policies~~

~~G. Overstates urgency to enforce carbon taxes~~

~~H. Relies on unreliable climate predictions~~

~~I. Fails to address historical climate fluctuations~~

~~J. Encourages investment in overshypped green technologies.~~

~~K. Exploits media to manipulate public perception~~

~~L. Ignores economic damage to developing nations.~~

None of these points elaborate how it is a hoax.

Major

III. Causes of Global warming being viewed as a hoax

~~A. Economic interests fueling concerns about financial burdens~~

~~B. Political agendas shaping the portrayal of climate change~~

~~C. Corporate influence promoting alternative narratives.~~

IV. Some suggested measures to confront climate challenges

~~A. Promotes transparent and unbiased~~

Date: _____

Day: _____

climate research.

B. Strengthens public awareness

C. Encourages global collaboration to develop science-driven climate policies.

If it is a hoax why do you need mitigation measures.

V. Conclusion.

Environmental issues have always been ~~the part of human history~~, with concerns ranging from deforestation to pollution.

However, ~~in recent years~~, few topics have sparked as much debate as climate change.

Does not match the tone, context and chosen stance.

This issue has become the central point of global discussion, as ~~rising temperature~~, extreme weather events, and ~~rising sea level~~ continue to make headlines. While many push for urgent action to protect the planet and its future, there are others who challenge the narrative. They argue that global warming, despite its widespread attention, is ~~nothing more than an exaggerated phenomenon~~ driven by political and economic interests, with a costly agenda behind it. The notion of global warming being an

Date: _____

Day: _____

Overblown crises is rooted in several causes. Economic concerns about the financial burdens of addressing climate change, political agendas that influence how issues are portrayed and corporate interest that promote alternative narratives all contribute to the skepticism surrounding global warming. These factors often hinder productive discussions and create confusion about the science behind climate change. In order to tackle these doubts, it is essential to engage in transparent, evidence-based debates that address these environmental issues.

Doesn't address the topic, no clear stance. Do you agree with the topic or disagree with it.

Global warming is often used to justify massive fundings by emphasizing the urgent need for action to mitigate its impacts. This is the reason that growing alarm surrounding climate change has led to the allocation of billions of dollars in government and private sector funding aimed at addressing environmental issues. According to the United Nations Climate Change Report, countries around the world pledged over \$100 billion annually in

No cohesive transition between paragraphs

~~Climate finance to help developing nations~~
~~cope with effects of global warming.~~ In this
way, the urgency surrounding global warming
serves as a powerful tool for securing
substantial financial resources, even as a
question about the effectiveness and transparency
of such spending remain.

How does
that prove
that it is a
hoax??

Global warming portrayal as an
urgent crisis is often undermined by the lack
of universally consistent scientific evidence.
While there is a broad agreement on certain
aspects of climate change, discrepancies in
data, models and predictions lead to debates
about the extent and timing of its impacts.

For instance, a 2019 study by the Global
Warming Policy Foundation revealed that
different climate models had ~~varying predictions~~
with some forecasting more severe warming
and others showing slower rates, which leads
to confusion and skepticism about accuracy of
climate projections. Thus, the inconsistency in
scientific evidence surrounding global warming
raises doubts about reliability of climate
change claims, weakening the urgency for

immediate global action.

As the debate continues surrounding global warming continues to intensify, there are some underlying factors that contribute to the widespread perception of climate change as an exaggerated crisis.

Economic interests often fuel concerns about the financial burdens associated with addressing global warming. Costs of mitigating climate change—such as transitioning to renewable energy, investing in green technologies, and implementing climate adaptation strategies—pose significant economic challenges, especially for industries reliant on traditional energy sources. A 2018 report by the International Energy Agency (IEA) estimated that the global transition to renewable energy would require around \$2.4 trillion annually in investment, which raises concerns about the strain this might put on economies, particularly in developing countries or those heavily reliant on fossil fuels. Consequently, the perceived high financial costs of

addressing climate change often lead to resistance, particularly from industries and governments concerned about economic stability and job losses.

In conclusion, while global warming remains a pressing issue with widespread implications, the skepticism surrounding its legitimacy is largely driven by economic, political, and corporate interests. The significant financial costs associated with addressing climate change, the inconsistencies in scientific evidence all contribute to the perception that global warming is an exaggerated crisis. Only through a unified, fact-driven approach can we effectively tackle the challenges posed by climate change and work towards a sustainable future.
