The Essay

A country's future is not secure when most of the population is not physically active and mentally sound. An active and energetic population is considered to be the life blood for the progress and prosperity of a nation. An unhealthy population comprising a comprised of stunted growth, fragile posture, and weak minds, is a liability all on the other hand. Such a liability is known as malnutrition in medical science. Pakistan falls in

Which the category of very few countries who face severe challenge of malnutrition.

In fact, the phenomenon has taken an alarming turn. The UNICEF data has some shocking facts about malnutrition.

According to it, 44% of the children in Pakistan are stunted, almost 17.7% of the population faces acute malnutrition, and almost 33% of the population is underweight. This is an alarming situation for Pakistan. There is a

dire need for immediate actions to deal with this issue. It is

very pertinent to ensure a healthy population in the country so that it hold the reins of future with ^{bright} vision and ~~cope~~ full capacity.
