

Topic: Overpopulation is a Myth, as the World's Resources are sufficient to support growing population, and technological innovation will solve any potential shortages.

outline

A. Introduction

- a. Overpopulation in the eyes of David Attenborough
- b. What is overpopulation?
- c. Thesis statement

B. How overpopulation is a myth?

- a. Earth has finite supply of natural resources while specific resources might be limited in certain areas.
- b. Population growth has significant, it's not always exponential.
 1. Influenced by various factors like healthcare and economic development.
- c. Overpopulation is the sole cause of environmental problems; stemming from consumption patterns, pollution and unsustainable practices.
- d. More people means more poverty. Economic development

and resources distribution plays a crucial role in poverty levels.

e. Population control is the only solution: Focusing solely on population control ignores the root cause of environmental and social problems.

C. How overpopulation is fact?

a. Growing population put a strain on resources like water, energy especially in regions with high population and limited resources.

b. Increased population lead to pollution, climate change and waste production.

c. Rapid urbanization due to population growth can strain infrastructure and housing.

d. Growing population sustainably is a significant challenge, requiring increased agricultural productivity.

e. Overpopulation exacerbate social tensions, inequality.

D. Recommendations to control overpopulation

a. Need technological advancements; advancement in agricultural, renewable energy, and resource recycling.

b. Investing in education and empowering women can lead to lower fertility rates

c. Addressing the root causes of poverty, inequality, and conflicts

E. Case Study: The Island of Easter (Rapa)

F. Conclusion

Essay

"Overpopulation is perhaps the biggest problem facing us and immigration is part of that problem. It has to be addressed." These

words of David Attenborough are addressing the biggest problem

overpopulation we're facing. It refers to a situation where the number

of people in specific area increased the capacity of that area such as

food, water, energy etc. Some people argue that overpopulation is myth because they think that the earth

has finite supply of natural resources and it might be limited in

certain areas. Additionally, population growth has significant, its not

always exponential. Furthermore, overpopulation is the sole cause of environmental problems; stemming from consumption patterns, pollutions. Moreover, more people means more poverty; economic development and resources distribution play a crucial role in poverty levels. On the other hand, some people opinion is that overpopulation is fact. ~~due to~~ Overpopulation put a strain on resources like water, energy and especially in regions with high population. Additionally, increased population leads to pollution, climate change, urbanization and waste production. Furthermore, growing population sustainably is a significant challenge and it exacerbate social tensions and inequality. Therefore, technological advancement, investing in education and empowering women are needed to solve this problem. Conclusively, overpopulation is a fact but some people considered that it is a myth.

paragraph #1

1. Firstly, growing population put a strain on resources like water, energy especially in regions with high population and limited resources. According to A. Einstein, that "overpopulation in various countries has become a serious threat to the well-being of many people and a grave obstacle to any attempt to organize peace in this planet." Conclusively, growing population become a big problem for people.

Para #2. Secondly, increased population lead to pollution, climate change and waste production. More people have more needs and they make more factories, industries for their basic needs. and it lead to climate change. According to global statistic that the richest 10% of the global population are responsible for approximately 50% of the global carbon emissions. Conclusively overpopulation leads to climate change.

Conclusion Paragraph

Conclusively, overpopulation is a fact but some people consider that it is a myth. On their perspectives, Earth has finite supply of natural resources, influence by various factors like healthcare and economic development.

This stance is right but excluding

these that are a lot of problem

due to overpopulation. For instance, strains on resources, pollution,

climate change, global warming, agricultural productivity, urbanization and social tensions. Therefore, to

counter these problems we need technological advancement, renewable energy, advancement in agriculture. Furthermore,

investing in education and empowering the women also control overpopulation.

According to Richard Rogers, "The only way forward, if we are going

to improve the quality of the environment is to get everybody involved."
