Q23

(i)

The environmental impact of renewable energy cannot be ignored as compared to traditional fossil fuels. For example, the elements used in solar panels production involves mining practices damaging to environment and wind turbines require steel, concrete and earth magnets. The production of renewable energy leads to damaging environment which cannot be ignored.

Sentence Structure

(ii)

The electric vehicles (EVs) are introduced in market as eco-friendly vehicle while the reality is, it involves lithium batteries obtained through mining which causes habitat destruction, soil contamination, and high water usage. Similarly, if their charging comes from electricity obtained through fossil fuels is also environmental damaging. Another issue of these is battery disposal, which may contribute to waste. However, it shows that EVs are viable option but not completely solution to reduce pollution.

(iii)

The challenge that is associated with the disposal of renewable energy systems is that renewable energy systems like solar panels and wind turbines typically range from 20-30 years and when their lifespan ends, the disposal of these is not known that how to disposal these which will lead to the accumulation of waste.

(iv)

The article suggest that renewable energy is not entirely pollution-free during its operational phase because the solar panels and wind turbines requires backup from fossil fuels or battery, which poses threat to environment as fossil fuels contribute to global warming and batteries require mining of lithium metals which also damage the environment during the process.

(v)

The article propose addressing the limitations of renewable energy as solar panel and wind turbines also damage the environment whether taking back-up, mining practices, batteries or in case of deforestation and its recycling. The need is that not to blindly rely on renewable systems as it have negative impacts, especially in the

Q4

06/10
