9- outlines that are not self explanatory or does not aligned to with the essay statement are liable to mark 0 and the essay would become null and void

This isn't the asked part. You are supposed to draw the comparison

#### d) Economic Implications

- (i) Infrastructure Loss
- (ii) Unemployment
- (iii) Stressed health resources

#### c) Urbanisation versus Climate Change

#### D) Conclusion

In today's world, people flee flooded villages, inhale toxic air and struggle to find space in ever-growing cities. Humanity is caught between vanishing ecosystems and rising urbanisations. A child in Karachi suffers from a heatstroke while another in Lagos grows up in a slum without a clean water.

These are not the distant realities, but they are everyday realities shaped by climate change and urbanisation. As both problems gain momentum, it has become detrimental to identify which of the two is more dangerous. Rapid urbanisation is

undoubtedly reshaping the modern life. On the other hand, it is straining land, water and energy resources, putting stress over transport and health facilities.

One study reveals that cities consume over two-thirds of global energy and account for more than 70% of carbon emissions. The rapid and unsustainable urbanisation has accelerated the climate change.

In the 21st century, climate-related disasters have displaced over 200 million people globally. This clarifies the extent to which the threat of climate change is affecting the very existence and survival

You are not supposed to provide any information in your introduction

of human. Though urbanization is a major threat, it remains one of the causes of the greater threat of climate change, which has far-reaching consequences for social, political, environmental, and economic systems.

First comes the social implications of climate change. The climate-related disasters like floods, droughts and intense heatwaves have aggravated the social peril of poverty. The 2022 floods of Pakistan have pushed millions of people into poverty. Most of them were farmers who solely rely on agriculture, but floods have destroyed the fields, uprooted their houses, deprived them of basic resources. It further translated into other social issues such as child marriages, illiteracy, health risks.
