

General instructions to be followed to pass essay

- 1- Spend time on rightly comprehension of the topic, you won't pass the essay unless and until you addressed the asked part
- 2- Try to make your main heading in the outline from the words in the question statement
- 3- Try to add hook in the introduction. The length of introduction must be of 2 sides. *Not aligned with the topic because you are*
- 4- your topic sentence in your argument must be aligned with the ending sentence. *Draw a comparative analysis of comparison urbanization and climate change*
- 5- Avoid firstly, secondly, thirdly etc. in outline
- 6- add references in your arguments with proper source. Go for diversification of references
- 7- Do not add new idea or point in Conclusion
- 8- You won't pass the essay if make more than 4-5 grammatical mistakes
- 9- outlines that are not self explanatory or does not aligned to with the essay statement are liable to mark 0 and the essay would become null and void

4 Threats poses by climate change

4.1 Climate change poses a serious threat to water availability

globally

2025/7/29 12:35

4.2 It poses a serious threat to food security globally.

4.3 It poses a serious threat to human health globally.

4.4 It also poses a threat to infrastructure.

4.5 It can cause many diseases in living organism.

4.6 It can raise the global temperature.

5 How ~~global~~ climate change poses a threat than

Urbanization is a threat but climate change is

global threat

5.2 Urbanization can cause food insecurity and water scarcity in one country or city but climate change causes food insecurity and water scarcity entirely in the world.

5.3 Urbanization can cause food

insecurity and water scarcity in one country or city but

climate change causes food insecurity and water scarcity entirely in the world.

5.4 Urbanization can cause infrastructure loss to one city but climate change can cause infrastructure loss to countries (Case study, The 2022 floods in ~~Pakistan~~ and wildfire in LA)

Point is fine but try to narrow it down

As in recent time the world witnessed rapid urbanization which in leads the humanity to many problems such as water scarcity, food insecurity, infrastructure loss, poor drainage system and a divide society which may bring crimes but this problem, rapid urbanization can be manageable through policy, planning, and governance. It is a short-to-medium term issue.

On the other hand the world is also facing a grave issue of climate change. It is a long-term issue affecting the entire planet. To address this issue the whole world cooperation, strong commitment, and strict enforcement of policies is needed.

The word "Rapid urbanization" means a very fast increase in the number of people living

Topic is not related to Pakistan

In cities compared to rural areas. People move to cities for better job opportunities, for education and for a better life. In Pakistan, cities like Karachi, Islamabad, and Lahore have grown rapidly because people move there for jobs and a better living standard.

On the other hand, climate change is a long-term change in Earth's temperature, weather patterns, and climate system, mainly caused by human activities and some natural forces.

Rapid urbanization poses many threats.

Rapid urbanization poses a threat to water availability. As people move from rural areas to urban areas, cities like

2025/7/29 12:37

water demand cannot keep up with the growing population, it leads to water scarcity in a particular city at region. In karachi one can witness how the growing population causes water scarcity in the city.

Similarly, Rapid urbanization is also a threat to food insecurity.

The limited land resources could not meet with people demand which is due to higher food insecurity in a region but this food insecurity can be temporary as though policies and good governance it can be solved easily.

Moving further, a rapid urbanization cause a divide in society. As elite can afford water, food, and other commodities easily. The poor often live in slums with no prospect.

2025/7/29 12:37

housing, sanitation, or any other service. This divide causes the urban poor to turn to crime. The divide causes inequality and it in poor people which leads them to extension and ~~suburban~~ illegal activities.

Rapid urbanization also poses a threat to air pollution but this instead can be in a region. As the number of people increases so the number of vehicles, infrastructure construction, and housing societies also increase which effects the air and the surrounding environment.

In last, the rapid urbanization is in itself a threat to climate change. Due to rapid urbanization the number of vehicles increases, causes the emission of harmful gasses. The need of infrastructure uses —

2025/7/29 12:37

usually results in deforestation - and the people to meet the needs of increases - mainly

number of industrial releases - mainly the destruction of carbon emission gas which is the main contributor of global warming. The

rise in temperature which

surface leads to glacier melt, disruptive rain fall pattern, and floods.

In contrast, climate change also poses a serious threat to water availability but this threat poses by climate change is globally. By melting glacier, the world will face water scarcity. According to UN, by 2028, half of the world's population is expected to be living in water-stressed areas.

can cause food insecurity globally. By taking the example of Pakistan, an agricultural country, due to disruptive rainfall pattern the Pakistan agriculture sector highly effected by climate change.

Finally, it poses a serious threat to humanity globally. As in 2022 floods Pakistan faces 4.6 million displacement, over 2.1 million homes were destroyed, 1400-1739 fatalities and around 2 million acre of crops ruined. Similarly in LA wildfires destroyed 6,831 structures, killed 2 people and around 20,000 residents and displaced. So climate change is a grave issue and a threat to humanity.

Finally, climate change can cause
- causing disease in human
- organism. By air pollution,

2025/7/29 12:37

respiratory diseases can be caused in humans. Climate change causes flood which therefore affects water quality — causes many stomach disease and kidney stone.

In the last, it can make the planet uninhabitable for future generation. According to NASA, with rise in temperature is recorded and if the carbon emission continues it will further trigger the global temperature and the planet will become uninhabitable for future generation.

Now by mentioning the threats poses both by climate change and rapid urbanization, damage damage is a major issue as compare to rapid urbanization as climate change poses threats to the above while the urbanization, threats to a region.

2025/7/29 12:38

Urbanization can be bad problem as seen in karachi but climate change is a global threat as it has effects on the entire world such as the 2022 flood in Pakistan, the 2025 wild fires in LA and so on.

Similarly, urbanization effect are region such as it effect the karachi city in Pakistan but the climate change can effect the entire planet by melting glaciess, disruptive rain fall patterns, drought and floods. Climate change knows no boundaries.

a. Money further, urbanization can cause food insecurity and water scarcity. As it causes in the city of karachi but climate change causes food insecurity and

2025/7/29 12:38

Urbanization impacts threat to water scarcity globally. So climate change poses greater threat than rapid urbanization.

Urbanization impacts threat to infrastructure and environment but the threat poses by climate change to infrastructure and environment is far more dangerous. One has witnessed the destruction caused by climate change in LA and Pakistan.

Summary, rapid urbanization poses many threats to society but it can be easily solved through better policies and governance as it is said. Hence threat in contrast, the climate change poses serious threats to the environment and a strong political and a strong commitment and effective policies is need by the whole world to mitigate Ghazi Paper
