

Date: _____

Question No # 01

Make a precis of the passage with suitable title.

Technological Advancement: Inability to Creative Thinking

The supreme goal of education has become the accession of information without having the ability to utilize knowledge properly. The human brain is trained to store a lot of disconnected information rather than effective admixable knowledge. From ancient times, the minds with knowledge of deep reflection and logical reasoning shift towards excess information with cramming of logics, statistics, and opinions. The learning of few things with deep understanding of critical thoughts is better than the cramming of excessive forgotten information. When institutions allow the student to get expertly

Date: _____

in a specific subject by abandoning irrelevant myths, then there will be the production of generation having deep analytical thinking. The technologies not only provide the endless information but also deprived the human minds from cultivation of judgement. This lost the patience of human to learn more accurately with deep analogical thinking.
